SDG1000X Series Function/Arbitrary Waveform Generator UM0201X-E01D

2017 SIGLENT TECHNOLOGIES CO., LTD

# **Declaration**

Copyright © SIGLENT TECHNOLOGIES CO., LTD. All rights reserved. Without permission, contents in this manual are not allowed to be copied, extracted or translated.

# **General Safety Summary**

Carefully read the following safety precautions to avoid any personal injuries or damages to the instrument and any product connected to it. To avoid potential hazards, please use the instrument as specified.

### Only qualified technical personnel should service this instrument. Avoid fire or open flame.

### Use properly rated power line connections.

Use only the specified power line which has been approved by your local regulatory agency.

#### Ground the Instrument.

The instrument is grounded through the protective ground conductor of the power line. To avoid electric shock, the ground conductor must be connected to the earth ground. Make sure the instrument is grounded correctly before connecting its input or output terminals.

#### Connect the signal wire correctly.

The potential of the signal wire ground is equal to the earth, therefore do not connect the signal wire to a high voltage. Do not touch the exposed contacts or components.

#### Observe all terminal ratings.

To avoid fire or electric shock, please observe all ratings and sign instructions on the instrument. Before connecting the instrument, please read the manual carefully to gain more information about the ratings.

#### Do not operate with suspected failures.

If you suspect that the product is damaged, please let only qualified service personnel check it.

#### Avoid circuit or wire exposure.

Do not touch exposed contacts or components when the power is on.

#### Do not operate in wet/damp conditions.

Do not operate in an explosive atmosphere.

#### Keep the surface of the instrument clean and dry.

### Safety Terms and Symbols

Terms used on the instrument. Terms may appear on the instrument:
DANGER: Indicates an injury or hazard that may immediately happen.
WARNING: Indicates an injury or hazard that may not immediately happen.
CAUTION: Indicates that a potential damage to the instrument or other property might occur.

Symbols used on the instrument. Symbols may appear on the instrument:

SDG1000X User Manual III

## Introduction to SDG1000X

The manual covers the following 2 models of SDG1000X Series Function/Arbitrary Waveform Generators: SDG1032X and SDG1062X.

SIGLENT's SDG1000X is a series of dual-channel function/arbitrary waveform generators with specifications of up to 60MHz maximum bandwidth, 150MSa/s sampling rate and 14-bit vertical resolution. The proprietary EasyPulse technology helps to solve the weaknesses inherent in traditional DDS generators when generating pulse waveforms, and the special square wave generator is capable of generating square waveforms with up to 60MHz frequency and low jitter. With these advantages, the SDG1000X can provide users with a variety of high fidelity and low jitter signals and can meet the growing requirements of complex and extensive applications.

### **Key Features**

- Dual-channel, with bandwidth up to 60MHz and amplitude up to 20Vpp
- 150MSa/s sampling rate, 14-bit vertical resolution, and 16kpts waveform length
- Innovative Easy Pulse technology, capable of generating lower jitter Pulse waveforms, brings a wide range and extremely high precision in pulse width and rise/fall times adjustment
- Special circuit for Square waves, which can generate Square wave with frequencies up to 60MHz and jitter less than 300ps+0.05ppm of period
- A variety of analog and digital modulation types: AM、DSB-AM、FM、PM、 FSK、ASK 、 PSK and PWM
- Sweep and Burst functions
- Harmonic waveforms generating function
- Waveforms combining function

- High precision Frequency Counter
- 196 kinds of built-in arbitrary waveforms
- Standard interfaces: USB Host, USB Device (USBTMC), LAN (VXI-11)
   Optional interface: GPIB
- 4.3" display

# **1 Quick Start**

This chapter covers the following topics:

- Handle Adjustment
- The Front/Rear Panel
- To Select a Waveform
- To Set Modulation/Sweep/Burst
- To Turn On/Off Output
- To Use Numeric Input
- To Use Common Function Keys

### 1.1 Handle Adjustment

To adjust the handle position of the SDG1000X, please grip the handle by the sides and pull it outward. Then, make the handle rotate to the desired position.

Figure 1-1 Viewing Position and Carrying Position

### 1.2 The Front/Rear Panel

This chapter will provide a brief introduction and description for the operation and functions of the front/rear panel.

### **Front Panel**

SDG1000X has a clear and simple front panel which includes a 4.3 inch screen, menu softkeys, numeric keyboard, knob, function keys, arrow keys, and channel control area.

Figure 1-2 Front Panel of SDG1000X

### **Rear Panel**

The rear panel provides multiple interfaces, including Counter, 10MHz In/Out, Aux In/Out, LAN, USB Device, Earth Terminal and AC Power Supply Input.

**10 MHz Clock Input/Output** 

Figure 1-3 Rear Panel of SDG1000X

### **User Interface**

The SDG1000X can only display parameters and waveform information for one channel at a time. The picture below shows the interface when CH1 chooses AM modulation of a sine waveform. The information displayed may vary depending on the function selected.

Figure 1-4 User Interface

#### 1. Waveform Display Area

Displays the currently selected waveform of each channel.

### 2. Channel Status Bar

Indicates the selected status and output configuration of the channels.

#### 3. Basic Waveform Parameters Area

Shows the current waveform's parameters of each channel. Press Parameter and select the corresponding softkey to highlight the parameter to configure. Then use number keys or knob to change the parameter value.

### 4. Channel Parameters Area

Displays the load and output settings of the currently selected channel.

Load ----Value of the output load, as selected by the user.

Press Utility  $\rightarrow$  Output  $\rightarrow$  Load, then use the softkeys, number keys or knob to change the parameter value; or continue pressing the corresponding output key for two second to switch between High Impedance and  $50\Omega$ .

High Impedance: display HiZ.

Load: display impedance value (the default is  $50\Omega$  and the range is  $50\Omega$  to 100kΩ).

Note: This setting does not actually change the instrument's output impedance of 50 $\Omega$  but rather is used to maintain amplitude accuracy into different load values.

**Output** ----Channel output state.

After pressing corresponding channel output control port, the current channel can be turned on/off.

### 5. LAN Status Icon

SDG1000X will show different prompt messages based on the current network status.

This mark indicates LAN connection is successful.

This mark indicates there is no LAN connection or LAN connection is unsuccessful.

#### 6. Mode Icon

SDG1000X will show different prompt messages based on the current mode.

This mark indicates current mode is Phase-locked.

This mark indicates current mode is Independent.

#### 7. Menu

Shows the menu corresponding to the displayed function. For example, Figure

1-4 shows the parameters of "AM modulation".

#### 8. Modulation Parameters Area

Shows the parameters of the current modulation function. After selecting the corresponding menu, use number keys or knob to change the parameter value.

### 1.3 To Select a Waveform

Press Waveforms to enter the menu as Figure 1-5 shows. The example below will help familiarize with the waveform selection settings.

Sine	Square	Ramp	Pulse J	Noise -WW-	Page 1/2 ►
DC	Arb				Page 2/2 ►

Figure 1-5 Waveform Selections

 Press Waveforms key and then press Sine softkey. The SDG1000X can generate sine waveforms with frequencies from 1µHz to 60MHz. By setting Frequency/Period, Amplitude/High level, Offset/Low level and Phase, a sine waveform with different parameters can be generated.

*CH1:Sine.ON.HiZ			CH2:Sine.ON.HiZ		
		/*	Frequency Amplitude Offset Phase	1.000 00 4.000 V⊭ 0.000 Vc 0.00 °	<mark>0kHz</mark> op ic
			Load Output	HIZ ON	<b>R</b> 5
Frequency Period	Amplitude HighLevel	Offset LowLevel	Phase	Harmonic Off	

Figure 1-6 Sine Display Interface

 Press Waveforms key and then press Square softkey. The generator can generate square waveforms with frequencies from 1µHz to 60MHz and variable duty cycle. By setting Frequency/Period, Amplitude/High level, Offset/Low level, Phase and DutyCycle, a square waveform with different parameters can be generated.

*CH1:Square.ON.HiZ			CH2:Sine.ON.HiZ		
		¥	Frequency Amplitude Offset Phase Duty	4.000 000 4.000 ∨p 0.000 ∨d 0.00 ° 50.000 %	DkHz p c
			Load Output	HiZ ON	<b>6</b> 8
Frequency Period	Amplitude HighLevel	Offset LowLevel	Phase	DutyCycle	

Figure 1-7 Square Display Interface

 Press Waveforms key and then press Ramp softkey. The generator can generate ramp waveforms with frequencies from 1µHz to 500kHz and variable symmetry. By setting Frequency/Period, Amplitude/High level, Offset/Low level, Phase and Symmetry, a ramp waveform with different parameters can be generated.

CH1:R	amp.ON.Hi	z	CH2:Sine.ON.HiZ		
		<b>*</b>	Frequency Amplitude Offset Phase Symmetry	/ <mark>1.000 00</mark> 4.000 ∨p 0.000 ∨d 0.00 ° 50.0 %	0kHz ip lc
			Load Output	HiZ ON	
Frequency Period	Amplitude HighLevel	Offset LowLevel	Phase	Symmetry	

Figure 1-8 Ramp Display Interface

4. Press Waveforms key and then press Pulse softkey. The generator can generate pulse waveforms with frequencies from 1µHz to 12.5 MHz and variable pulse width and rise/fall times. By setting Frequency/Period, Amplitude/High level, Offset/Low level, PulWidth/Duty, Rise/Fall and Delay,

*CH1:Pulse.ON.HiZ			CH2:Sine.ON.HiZ			
			Frequency	1.000 00	00kHz	
} \			Amplitude	4.000 Vj	op	
		Ť	Offset	0.000 Ve	dc	
			Pulse Widt	h 200.000	us	
				Rise Edge 16.8ns		
			Delay	0.000 000 s		
			Load	HiZ		
			Output	ON	वि 🔓	
Frequency	Amplitude	Offset	PulWidth	Rise	Delau	
Period	HighLevel	LowLevel	DutyCycle	Fall	Delay	

a pulse waveform with different parameters can be generated.

Figure 1-9 Pulse Display Interface

5. Press Waveforms key and then press Noise softkey. The generator can generate noise with a 60MHz bandwidth. By setting Stdev and Mean, noise with different parameters can be generated.

*CH1:Noise.ON.HiZ			CH2:S	ine.ON.HiZ	
Annua anna anna anna anna anna anna anna			Stdev Mean	<mark>39<mark>6</mark>.6m\ 0.000 V</mark>	
			Load Output	HiZ ON	<b>6</b> 8
	Stdev	Mean			

Figure 1-10 Noise Display Interface

6. Press Waveforms key and then press Page 1/2, last press the DC softkey. The generator can generate a DC signal with a level up to  $\pm 10V$  into a HighZ load or  $\pm 5V$  into a  $50\Omega$  load.

*CH1:DC.ON.HiZ	CH2:Sine.ON.HiZ			
	¥	DC Offset	0.000 V	
		Load Output	HiZ ON	8 9
	Offset			

Figure 1-11 DC Display Interface

7. Press Waveforms key and then press Page 1/2, last press the Arb softkey. The generator can generate repeatable arbitrary waveforms with 16K points and frequencies up to 6MHz. By setting Frequency/Period, Amplitude/High level, Offset/Low level and Phase, an arbitrary waveform with different parameters can be generated.

*CH1:Arb.ON.HiZ			CH2:Sine.ON.HiZ		
<mark>╶╶╶╴╴╴╴</mark>			Frequency Amplitude Offset Phase	7 <b>1.000 00</b> 4.000 V 0.000 V 0.00 °	DOkHz pp dc

Frequency Period	Amplitude HighLevel	Offset LowLevel	Phase		Arb Type

Figure 1-12 Arbitrary Waveform Display Interface

### 1.4 To Set Modulation/Sweep/Burst

As shown in Figure 1-13, there are three keys on the front panel which are used for modulation, sweep and burst settings. The instructions below will help to explain these functions.

Figure 1-13 Modulate/Sweep/Burst Key

### 1. Press Mod, the Modulation function will be enabled.

The modulated waveform can be changed by modifying the parameters such as Type, Source, AM Depth, AM Freq, Shape, etc. The SDG1000X can modulate waveforms using AM, FM, PM, ASK, FSK, PSK, PWM and DSB-AM, etc. Pulse waveforms can only be modulated using PWM. Noise and DC waveforms cannot be modulated.

CH1:S	ine.ON.HiZ	Mod	d CH2:Sine.ON.HiZ		
	$\mathbb{N}$	₹,	Frequency Amplitude Offset Phase	<ul> <li>1.000 00</li> <li>4.000 ∨i</li> <li>0.000 ∨i</li> <li>0.000 °</li> </ul>	00kHz op dc
AM Depth	100.0 %	6	Load	HiZ	<b>6</b> 8
AM Freq	10 <mark>0</mark> .000	0 000 Hz	Output	ON	
Type	Source	AM	Shape	AM	
AM	Internal	Depth	Sine	Freq	

Figure 1-14 Modulation Display Interface

### 2. Press Sweep, the Sweep function will be enabled.

Sine, square, ramp and arbitrary waveforms support the sweep function. In sweep mode, the SDG1000X can generate signals with variable frequency. The available range of sweep time is from 1ms to 500s. The trigger source can be "Internal", "External" or "Manual".

CH1:S	ine.ON.HiZ	Sweep	CH2:Si	ne.ON.HiZ	
			Frequency Amplitude Offset Phase	1.000 00 4.000 ∨r 0.000 ∨c 0.00 °	0kHz op dc
Sweep Ti	me <mark>1</mark> .000 0	00 s

Sweep	StartFreq	StopFreq	Source	Trig Out	Page
Time	CenterFreq	FreqSpan	Internal	Off	1/2 🕨

Figure 1-15 Sweep Waveform Display Interface

### 3. Press Burst, the Burst function will be enabled.

Burst signals for sine, square, ramp, pulse or arbitrary waveforms may be generated. Start Phase ranges from 0° to 360° and Burst Period ranges from 1µs to 1000s.

CH1:S	ine.ON.HiZ	Burst	CH2:Si	ine.ON.HiZ	
$\bigcirc$			Frequency Amplitude Offset Phase	<ul> <li>1.000 00</li> <li>4.000 V)</li> <li>0.000 V)</li> <li>0.000 °</li> </ul>	)0kHz op dc
Start Pha	se 0.00 $^\circ$				
Cycles	1Cycle		Load	HiZ	
Burst Per	iod 1 <mark>0</mark> .000	000ms	Output	ON	🖻 🔓
NCycle Gated	Cycles Infinite	Start Phase	Burst Period	Source Internal	Page 1/2 ►

Figure 1-16 Burst Waveform Display Interface

### 1.5 To Turn On/Off Output

As shown in Figure 1-17, there are two keys on the right side of the operation panel which are used to enable / disable the output of the two channels. Choose a channel and press the corresponding Output key, the key backlight will be lighted and the output will be enabled. Press the Output key again, the key backlight will be extinguished and the output will be disabled.

Keep pressing the corresponding output key for two second to switch between High Impedance and  $50\Omega$  load.

### 1.6 To Use Numeric Input

As shown in

Figure 1-18, there are three sets of keys on the front panel, which are arrow keys, knob and numeric keyboard. The instructions below will help to familiarize you with the digital input selection.

Figure 1-18 Front Panel Digital Input

- 1. The numeric keyboard is used to enter the parameter's value.
- 2. The knob is used to increase (clockwise) or decrease (counterclockwise) the current digit when setting parameters
- 3. When using knob to set parameters, the arrow keys are used to select the digit to be modified; When using numeric keyboard to set parameters, the left arrow key is used as a Backspace function.

### 1.7 To Use Common Function Keys

As shown in Figure 1-19, there are five keys on the operation panel which are labeled Parameter, Utility, Store/Recall, Waveforms, and Ch1/Ch2. The instructions below will help to familiarize you with these functions.

Figure 1-19 Waveforms Utility and Parameter Key

- 1. The Parameter key makes it convenient for the operator to set the parameters of basic waveforms directly.
- 2. The Utility key is used to set the auxiliary system function, such as output configurations, interface setting, system setting information, performing the instrument self-test and reading the calibration information, etc.
- 3. The Store/Recall key is used to store and recall waveform data and configuration information.
- 4. The Waveforms key is used to select basic waveforms.
- 5. The Ch1/Ch2 key is used to switch the currently selected channel between CH1 and CH2. After start-up, CH1 is selected as default. At this point, press the key to select CH2.

# **2 Front Panel Operations**

Up until this point we have briefly described the SDG1000X front panel controls. If the user still has any questions on these topics at this point, it is suggested that you review Quick Start (Chapter 1) once more.

This chapter covers the following topics:

- To Set Sine
- To Set Square
- To Set Ramp
- To Set Pulse
- To Set Noise
- To Set DC
- To Set Arbitrary
- To Set Harmonic Function
- To Set Modulation Function
- To Set Sweep Function
- To Set Burst Function
- To Store and Recall
- To Set Utility Function

It is recommended that you read this chapter carefully so as to understand the SDG1000X's versatile waveform setting functions and additional operation methods.

### 2.1 To Set Sine Waveform

Press Waveforms key to select the waveform function and then press the Sine softkey. The sine waveform parameters are set by using the sine operation menu.

The parameters available for sine waveforms include frequency/period, amplitude/high level, offset/low level and phase. Different sine signals can be generated by setting these parameters. As shown in Figure 2-1, in the soft key menu, select Frequency. The frequency parameter area is highlighted in the parameter display window, and users can set the frequency value here.

*CH1:S	ine.ON.HiZ		CH2:Si	ne.ON.HiZ	
		/*	Frequency Amplitude Offset Phase	7 <mark>1.000 00</mark> 4.000 ∨r 0.000 ∨¢ 0.00 °	00kHz op dc

Frequency Period	Amplitude HighLevel	Offset LowLevel	Phase	Harmonic Off	

Figure 2-1 Sine Parameters Display Interface

Table2-1	Menu Ex	planations	of Sine	Waveform
		pianationio	01 01110	

Function menu	Settings	Explanations
Frequency/ Period		Set the signal frequency or period; The current parameter will be switched at a second press.
Amplitude/ HighLevel		Set the signal amplitude or high level; The current parameter will be switched at a second press.
Offset/ LowLevel		Set the signal offset or low level; The current parameter will be switched at a second press.
Phase		Set the phase of the signal.

### To Set the Frequency/Period

Frequency is one of the most important parameters of basic waveforms. For different instrument models and waveforms, the available ranges of frequency are different. For detailed information, please refer to "SDG1000X Datasheet". The default frequency is 1kHz.

1. Press Waveforms  $\rightarrow$  Sine  $\rightarrow$  Frequency, to set the frequency parameter. The frequency shown on the screen when the instrument is powered on is the default value or the set value of last power down. If Period (rather than Frequency) is the desired parameter, press Frequency/Period again to enter the Period mode. The current value for the waveform's period is now displayed in inverse color. Press the Frequency/Period key once again to return to the Frequency entry mode.

#### 2. Input the desired frequency.

Use the numeric keyboard to input the parameter value directly, and press the corresponding key to select the parameter unit. Or use the arrow keys to select the digit to edit, and then use the knob to change its value.

Figure 2-2 Setting the Frequency

### SIGLENT

### Note:

When using the numeric keyboard to enter the value, the left arrow key can be used to move the cursor backward and delete the value of the previous digit.

### To Set the Amplitude

The amplitude setting range is limited by the "Load" and "Frequency/Period" settings. For detailed information, please refer to "SDG1000X Datasheet".

### 1. Press Waveforms $\rightarrow$ Sine $\rightarrow$ Amplitude, to set the amplitude.

The amplitude shown on the screen when the instrument is powered on is the default value or the set value of last power down. If setting the waveform's high level is desired, press the Amplitude/HighLevel key again to switch into the high level parameter (the current operation is displayed in inverse color).

### 2. Input the desired amplitude.

Use the numeric keyboard to input the parameter value directly, and press the corresponding key to select the parameter unit. Or use the arrow keys to select the digit to edit, and then use the knob to change its value.

*CH1:Sine.ON.HiZ			CH2:Sine.ON.HiZ			
		Frequency	/ 1.000 00	0kHz		
		Amplitude	4_			
		Offset	0.000 V	0.000 Vdc		
			Phase	0.00 °		
			Load	Hi7		
			Output	ON	8 문	
Vpp	mVpp	Vrms	mVrms		Cancel	

Figure 2-3 Setting the Amplitude

### To Set the Offset

The offset setting range is limited by the "Load" and "Amplitude/HighLevel" settings. For detailed information, please refer to "SDG1000X Datasheet". The default value is 0Vdc.

1. Press Waveforms  $\rightarrow$  Sine  $\rightarrow$  Offset, to set the offset.

The offset shown on the screen when the instrument is powered on is the default value or the set value of last power down. If you want to set the waveform by low level, press the Offset/LowLevel key again, to switch into the low level parameter (the current operation is displayed in inverse color).

2. Input the desired offset.

Use the numeric keyboard to input the parameter value directly, and press the corresponding key to select the parameter unit. Or use the arrow keys to select the digit to edit, and then use the knob to change its value.

Figure 2-4 Setting the Offset

#### To Set the Phase

1. Press Waveforms  $\rightarrow$  Sine  $\rightarrow$  Phase, to set the phase.

### SIGLENT

The Phase shown on the screen when the instrument is powered on is the default value or the set value of last power down.

### 2. Input the desired phase.

Use the numeric keyboard to input the parameter value directly and press the corresponding key to select the parameter unit. Or use the arrow keys to select the digit to edit, and then use the knob to change its value.

*CH1:Sine.ON.HiZ	CH2:Sine.ON.HiZ		
	Frequency Amplitude Offset Phase	7 1.000 00 4.000 Vi 0.000 Vi 180_	00kHz op dc
	Load Output	HiZ ON	<b>요</b> 1
	0		Cancel

Figure 2-5 Setting the Phase

#### Note:

When the independent mode is enabled, the phase parameter cannot be modified

### 2.2 To Set Square Waveform

Press Waveforms key to select the waveform function, and press the Square softkey. The square waveform parameters are set by using the Square operation menu.

The parameters of square waveforms include frequency/period, amplitude/high level, offset/low level, phase and duty. As shown in Figure 2-6, select DutyCycle. The duty cycle parameter area is highlighted in the parameter display window, and users can set the duty cycle value here.

*CH1:Square.ON.HiZ			CH2:Sine.ON.HiZ		
		¥	Frequency Amplitude Offset Phase Duty	<ul> <li>✓ 1.000 00</li> <li>✓ 4.000 ∨r</li> <li>0.000 ∨c</li> <li>0.000 °</li> <li><b>50.000 °</b></li> </ul>	00kHz op dc 6
			Load Output	HiZ ON	8 1
Frequency Period	Amplitude HighLevel	Offset LowLevel	Phase	DutyCycle	

Figure 2-6 Square Parameters Display Interface

Tahla2_2 Manu Ev	nlanations of '	Sauaro Waveform
	planations of	

Function Menu	Settings	Explanation
Frequency/ Period		Set the signal frequency or period; The current parameter will be switched at a second press.
Amplitude/ HighLevel		Set the signal amplitude or high level; The current parameter will be switched at a second press.
Offset/ LowLevel		Set the signal offset or low level; The current parameter will be switched at a second press.
Phase		Set the phase of the signal.
DutyCycle		Set the duty cycle for square waveform.

### To Set the Duty Cycle

**Duty Cycle:** The ratio of the amount of time the pulse is in the high state and the waveform's period.

The duty cycle setting range is limited by the "Frequency/Period" setting. For detailed information, please refer to "SDG1000X Datasheet". The default value is 50%.

1. Press Waveforms  $\rightarrow$  Square  $\rightarrow$  DutyCycle, to set the duty cycle.

The duty cycle shown on the screen when the instrument is powered on is the default value or the set value of last power down.

2. Input the desired Duty Cycle.

Use the numeric keyboard to input the parameter value directly and press the corresponding key to select the parameter unit. Or use the arrow keys to select the digit to edit, and then use the knob to change its value. The generator will change the waveform immediately.

### Note:

The methods of setting other parameters of square signal are similar to sine waveform function.

### 2.3 To Set Ramp Waveform

Press Waveforms key to select the waveform function, and press the Ramp softkey. The ramp waveform parameters are set by using the ramp operation menu.

The parameters for ramp waveforms include frequency/period, amplitude/high level, offset/low level, phase and symmetry. As shown in Figure 2-8, in the soft key menu, select Symmetry. The symmetry parameter area is highlighted in the parameter display window, and users can set the symmetry value here.

Phase		Set the phase of the signal.
Symmetry		Set the symmetry for ramp waveform.
### To Set the Symmetry

**Symmetry:** The percentage that the rising period takes up the whole Period.

Input Range: 0~100%

Default Value: 50%

1. Press Waveforms  $\rightarrow$  Ramp  $\rightarrow$  Symmetry, to set the symmetry.

The symmetry shown on the screen when the instrument is powered on is the default value or the set value of last power down.

2. Input the desired Symmetry.

Use the numeric keyboard to input the parameter value directly, and press the corresponding key to select the parameter unit. Or use the arrow keys to select the digit to edit, and then use the knob to change its value. The generator will change the waveform immediately.

#### Note:

The methods of setting other parameters of ramp signal are similar to sine waveform function.

# 2.4 To Set Pulse Waveform

Press Waveforms key to select the waveform function, and press the Pulse softkey. The pulse waveform parameters are set by using the pulse operation menu.

The parameters for pulse waveforms include frequency/period, amplitude/high level, offset/low level, width, rise/fall and delay. As shown in Figure 2-10, in the soft key menu, select PulWidth. The pulse width parameter area is highlighted in the parameter display window, and users can set the pulse width value here.

*CH1:Pi	ulse.ON.Hii	z	CH2:Sine.ON.HiZ

Offset/ LowLevel		Set the signal offset or low level; The current parameter will be switched at a second press.
PulWidth/ DutyCycle		Set the signal pulse width or duty cycle; The current parameter will be switched at a second press.
Rise/ Fall		Setting the rise edge or fall edge for pulse waveform. The current parameter will be switched at a second press.

Table 2-4 Menu Explanations of Pulse Waveform

Delay	Setting the delay for pulse waveform.
-------	---------------------------------------

### To Set the Pulse Width/DutyCycle

Pulse width is defined as the time from the 50% threshold of a rising edge amplitude to the 50% threshold of the next falling edge amplitude (as shown in the figure below). The pulse width setting range is limited by the "Minimum Pulse Width" and "Pulse Period" setting. For detailed information, please refer to "SDG1000X Datasheet". The default value is 200µs.

Pulse duty cycle is defined as the percentage that the pulse width takes up in the whole period. Pulse duty cycle and pulse width are correlative. Once a parameter is changed, the other will be automatically changed.

1. Press Waveforms  $\rightarrow$  Pulse  $\rightarrow$  PulWidth, to set the pulse width.

The pulse width shown on the screen when the instrument is powered on is the default value or the set value of last power down. If you want to set the waveform by duty, press the PulWidth/DutyCycle key again, to switch into the duty parameter (the current operation is displayed in inverse color).

### 2. Input the desired Pulse Width.

Use the numeric keyboard to input the parameter value directly, and press the corresponding key to select the parameter unit. Or use the arrow keys to

select the digit to edit, and then use the knob to change its value. The generator will change the waveform immediately.

S	ms	us	ns		Cancel	

Figure 2-11 Setting the Pulse Width

### To Set the Rise/Fall Edge

Rise edge time is defined as the duration of the pulse amplitude rising from 10% to 90% threshold, while fall edge time is defined as duration of the pulse amplitude moving down from 90% to 10% threshold. The setting of rise/fall edge time is limited by the currently specified pulse width limit. Users can set rise edge and fall edge independently.

## 1. Press Waveforms $\rightarrow$ Pulse $\rightarrow$ Rise to set the rise edge.

The rise edge shown on the screen when the instrument is powered on is the default value or the set value of last power down. If you want to set the waveform by fall edge, press the **Rise/Fall** key again, to switch into the fall edge parameter (the current operation is displayed in inverse color).

#### 2. Input the desired rise edge.

Use the numeric keyboard to input the parameter value directly, and press the corresponding key to select the parameter unit. Or use the arrow keys to

select the digit to edit, and then use the knob to change its value. The generator will change the waveform immediately.

# 2.5 To Set Noise Waveform

Press Waveforms key to select the waveform function, and press the Noise softkey. The noise parameters are set by using the noise operation menu.

The parameters for noise include stdev, mean and bandwidth. As shown in Figure 2-13, in the soft key menu, select Stdev, The stdev parameter area is highlighted in the parameter display window, and users can set the stdev value here. Noise is non-periodic signal which has no frequency or period.

### 2. To Select the Stored Waveform

Choose Waveforms  $\rightarrow$  Page 1/2  $\rightarrow$  Arb  $\rightarrow$  Arb Type  $\rightarrow$  Stored Waveforms to enter the following interface, as shown in Figure 2-19.

Addr(C)   <mark>/Local</mark> <del>∾ Local(C:)</del>				
🗎 1_noise_r	am.bin			
File Type				Page
Data	Browse	Recall	Delete	1/2 ►

Figure 2-19 Stored Waveform Display Interface

Rotate the knob to choose the desired waveform. Then select Recall or press the knob to recall the corresponding waveform.

# 2.8 To Set Harmonic Function

The SDG1000X can be used as a harmonic generator to output harmonics with specified order, amplitude and phase. According to the Fourier transform, a periodic time domain waveform is the superposition of a series of sine waveforms as shown in the equation below:

 $f(t) = A_1 \sin(2\pi f_1 t + \varphi_1) + A_2 \sin(2\pi f_2 t + \varphi_2) + A_3 \sin(2\pi f_3 t + \varphi_3) + \dots$ 

Generally, the component with  $f_1$  frequency is called fundamental waveform,  $f_1$  is fundamental waveform frequency,  $A_1$  is fundamental waveform amplitude, and  $\phi_1$  is fundamental waveform phase. The frequencies of the other components (called harmonics) are all integral multiples of the fundamental waveform. Components whose frequencies are odd multiples of the fundamental waveform frequency are called odd harmonics and components whose frequencies are even multiples of the fundamental waveform frequency are called odd harmonics and components whose frequencies are even multiples of the fundamental waveform frequency are called even harmonics.

Press Waveforms  $\rightarrow$  Sine  $\rightarrow$  Harmonic and choose "On", then press Harmonic Parameter to enter the following interface.

Figure 2-20 Harmonic Interface

Function menu	Settings	Explanations
Туре		Set the harmonic type to "odd", "ever" or "all".
Order		Set the order of the harmonic.
Harmonic Ampl		Set the amplitude of the harmonic.
Harmonic Phase		Set the phase of the harmonic.
Cancel		Return to the sine parameters menu.

### To Select the Harmonic Type

The SDG1000X can output odd harmonics, ever harmonics and user-defined orders of harmonics. After entering the harmonic setting menu, press Type to select the desired harmonic type.

- 1. Press Even, the instrument will output fundamental waveform and even harmonics.
- 2. Press Odd, the instrument will output fundamental waveform and odd harmonics.
- 3. Press All, the instrument will output fundamental waveform and all the user-defined orders of harmonics.

### To Set the Harmonic Order

After entering the harmonic setting menu, press Order, the use the numeric keyboard or knob to input the desired value.

- The range is limited by the maximum output frequency of the instrument and current fundamental waveform frequency.
- Range: 2 to maximum output frequency of the instrument ÷ current fundamental waveform frequency
- The maximum is 10.

#### To Select the Harmonic Amplitude

After entering the harmonic setting menu, press Harmonic Ampl to set the harmonic amplitude of each order.

1. Press Order to select the sequence number of the harmonic to be set.

2. Press Harmonic Ampl to set the amplitude of the harmonic selected. Use the arrow keys and knob to change the value. Or use the numeric keyboard to input the amplitude value and then select the desired unit from the pop-up menu. The units available are Vpp, mVpp and dBc.

#### To Select the Harmonic Phase

After entering the harmonic setting menu, press Harmonic Phase to set the harmonic phase of each order.

- 1. Press Order to select the sequence number of the harmonic to be set.
- 2. Press Harmonic Phase to set the phase of the harmonic selected. Use the arrow keys and knob to change the value. Or use the numeric keyboard to input the phase value and then select the unit °.

# 2.9 To Set Modulation Function

Use the Mod key to generate modulated waveforms. The SDG1000X can generate AM, FM, ASK, FSK, PSK, PM, PWM and DSB-AM modulated waveforms. Modulating parameters vary with the types of the modulation. In AM, users can set the source (internal/external), depth, modulating frequency, modulating waveform and carrier. In DSB-AM, users can set the source (internal/external), modulating frequency, modulating waveform and carrier. In FM, users can set the source (internal/external), modulating waveform and carrier. In FM, users can set the source (internal/external), modulating frequency, frequency deviation, modulating waveform and carrier. In PM, users can set the source (internal/external), phase deviation, modulating frequency, modulating waveform and carrier. In ASK, users can set the source (internal/external), key frequency and carrier. In FSK, users can set the source (internal/external), key frequency, hop frequency, and carrier. In PSK, users can set the source (internal/external), key frequency, hop frequency, polarity and carrier. In PWM, users can set the source (internal/external), modulating frequency, width/duty cycle deviation, modulating waveform and carrier.

We will introduce how to set these parameters in details according to the modulation types.

# 2.9.1 AM

The modulated waveform consists of two parts: the carrier and the modulating waveform. In AM, the amplitude of the carrier varies with the instantaneous voltage of the modulating waveform.

Press  $Mod \rightarrow Type \rightarrow AM$ , the parameters of AM modulation are shown in Figure 2-21.

CH1:S	ine.ON.HiZ	. Mod	CH2:Si	ine.ON.HiZ

		⊨zpianau		AIVI Fa	ameters

	Arb	
AM Freq		Set the modulating waveform frequency. Frequency range: 1mHz~20kHz (internal source only).

#### **To Select Modulation Source**

The SDG1000X can accept modulating signal from an internal or external modulation source. Press  $Mod \rightarrow AM \rightarrow Source$  to select "Internal" or "External" modulation source. The default is "Internal".

#### 1. Internal Source

When internal AM modulation source is selected, press Shape to select Sine, Square, Triangle, UpRamp, DnRamp, Noise or Arb as modulating waveform.

- Square: 50% duty cycle
- Triangle: 50% symmetry
- UpRamp: 100% symmetry
- DnRamp: 0% symmetry
- Arb: the arbitrary waveform selected of the current channel

#### Note:

Noise can be used as modulating waveform but cannot be used as the carrier.

#### 2. External Source

When external AM modulation source is selected, the generator accepts external modulating signal from the [Aux In/Out] connector at the rear panel. At this time, the amplitude of the modulated waveform is controlled by the signal level applied to the connector. For example, if the modulation depth is set to 100%, the output amplitude will be the maximum when the modulating signal is +6V and the minimum when the modulating signal is -6V.

#### **Key Points:**

The SDG1000X can use one channel as a modulating source for the other channel. The following example takes the output signal of CH2 as the modulating waveform.

1. Connect the CH2 output terminal to [Aux In/Out] connector on the rear

panel using a dual BNC cable.

- 2. Select CH1 and press Mod to select the desired modulation type as well as set the corresponding parameters, and then select external modulation source.
- 3. Select CH2 and select the desired modulating waveform and set the corresponding parameters.
- 4. Press Output to enable the output of CH1.

## To Set Modulation Depth

Modulation depth expressed as a percentage indicates the amplitude variation degree. AM modulation depth varies from 1% to 120%. Press AM Depth to set the parameter.

- In the 0% modulation, the output amplitude is the half of the carrier's amplitude.
- In the 120% modulation, the output amplitude is the same with the carrier's amplitude.
- For an external source, the depth of AM is controlled by the voltage level on the connector connected to the [Aux In/Out]. ±6V correspond to 100% depth.
- When external modulation source is selected, this menu is hidden.

### To Set Modulation Frequency

When internal modulation source is selected, press AM Freq to highlight the parameter, then use the numeric keyboard or arrow keys and knob to input the desired value.

- The modulation frequency ranges from 1mHz to 20kHz.
- When external modulation source is selected, this menu is hidden.

# 2.9.2 DSB-AM

DSB-AM is an abbreviation for Double-Sideband Suppressed Carrier – Amplitude Modulation. Press  $Mod \rightarrow Type \rightarrow DSB-AM$ . The parameters of DSB-AM modulation are shown in Figure 2-22.

CH1:S	ine.ON.HiZ	Mod	CH2:Si	ine.ON.HiZ	
		Frequency Amplitude Offset Phase	7 1.000 00 4.000 ∨ 0.000 ∨ 0.00 °	D0kHz pp dc	
DSB Freq 10 <mark>0.000 000 Hz</mark>			Load Output	HiZ ON	
Type DSB-AM	Source Internal	DSB Freq	Shape Sine		

Figure 2-22 Setting Interface of DSB-AM Modulation

Function Menu	Settings	Explanation
Туре	DSB-AM	DSB Amplitude modulation.
Source	Internal	The source is internal.
	External	The source is external. Use the [Aux In/Out] connector at the rear panel.
DSB Freq		Set the modulating waveform frequency. Frequency range: 1mHz~ 20kHz (internal source only).
	Sine	
	Square	
	Triangle	
Shape	UpRamp	Choose the modulating waveform.
	DnRamp	
	Noise	
	Arb	

#### Note:

The methods of setting the parameters of DSB-AM are similar to AM.

# 2.9.3 FM

The modulated waveform consists of two parts: the carrier and the modulating waveform. In FM, the frequency of the carrier varies with the instantaneous voltage of the modulating waveform.

Press  $Mod \rightarrow Type \rightarrow FM$ , the parameters of FM modulation are shown in Figure 2-23.

CH1:S	ine.ON.HiZ	Mod	CH2:S	ine.ON.HiZ	
HANNALA.			Frequency Amplitude Offset Phase	7 1.000 00 4.000 √ 0.000 √ 0.00 °	)OkHz pp dc
FM Freq 100.000 000 Hz			Load	HiZ	
Freq Dev 10 <mark>0</mark> .000 000 Hz			Output	ON	
Type	Source	FM	Shape	FM	
FM	Internal	Dev	Sine	Freq	

Figure 2-23 Setting Interface of FM Modulation

Function Menu	Settings	Explanation
Туре	FM	Frequency modulation
	Internal	The source is internal
Source	External	The source is external. Use the [Aux In/Out] connector at the rear panel.
Freq Dev		Set the frequency deviation
	Sine	
	Square	
Shano	Triangle	Choose the modulating waveform
Shape	UpRamp	Choose the modulating wavelonn.
	DnRamp	
	Noise	

Table 2-11 Menu Explanations of the FM Parameters

	Arb	
FM Freq		Set the modulating waveform frequency. Frequency range 1mHz~ 20kHz (internal source).

#### **To Set Frequency Deviation**

Press FM Dev to highlight the parameter, and then use the numeric keyboard or arrow keys and knob to input the desired value.

- The deviation should be equal to or less than the carrier frequency.
- The sum of the deviation and the carrier frequency should be equal to or less than maximum frequency of the selected carrier waveform.

#### Note:

The methods of setting other parameters of FM are similar to AM.

# 2.9.4 PM

The modulated waveform consists of two parts: the carrier and the modulating waveform. In PM, the phase of the carrier varies with the instantaneous voltage level of the modulating waveform.

Press  $Mod \rightarrow Type \rightarrow PM$ , the parameters of PM modulation are shown in Figure 2-24.

CH1:S	ine.ON.HiZ	Mod	CH2:S	ine.ON.HiZ	
		Frequency Amplitude Offset Phase	7 1.000 00 4.000 V( 0.000 V( 0.00 °	00kHz op dc	
PM Freq 100.000 000 Hz			Load	HiZ	P 2
Phase Dev 10 <mark>0</mark> .00 °			Output	ON

	Arb	
PM Freq		Set the modulating waveform frequency. Frequency range: 1mHz~ 20kHz.

#### To Set Phase Deviation

Press Phase Dev to highlight the parameter, and then use the numeric keyboard or arrow keys and knob to input the desired value.

- Use the numeric keyboard or arrow keys and knob to input the desired value.
- The range of phase deviation is from 0° to 360° and the default value is 100°.

#### Note:

The methods of setting other parameters of PM are similar to AM.

# 2.9.5 FSK

The FSK is Frequency Shift Keying, the output frequency of which switches between two preset frequencies (carrier frequency and the hop frequency or sometimes known as mark frequency (1) and space frequency (0)).

Press  $Mod \rightarrow Type \rightarrow FSK$ , the parameters of FSK modulation are shown in Figure 2-25.

CH1:S	ine.ON.HiZ	. Mod	CH2:Si	ne.ON.HiZ	
	A NAAAAAA //////////////////////////////		Frequency Amplitude Offset Phase	1.000 00 4.000 V( 0.000 V( 0.00 °	)OkHz op dc
Key Freq 10 <mark>0</mark> .000 000 Hz Hop Freq 1.000 000MHz		Load Output	HiZ ON		
Type FSK	Source Internal	Key Freq	Hop Freq		

Figure 2-25 Setting Interface of FSK Modulation

Function Menu	Settings	Explanation
Туре	FSK	Frequency shift keying modulation.
Source	Internal	The source is internal.
	External	The source is external. Use the [Aux In/Out] connector at the rear panel.
Key Freq		Set the frequency at which the output frequency shifts between the carrier frequency and the hop frequency (internal modulation only): 1mHz~ 50kHz.
Hop Freq		Set the hop frequency.

Table 2-13 Menu Explanations of the FSK Parameters

#### To Set Key Frequency

When internal modulation source is selected, press Key Freq to set the rate at

which the output frequency shifts between "carrier frequency" and "hop frequency".

- Use the numeric keyboard or arrow keys and knob to input the desired value.
- The key frequency ranges from 1mHz to 50kHz.
- When external modulation source is selected, this menu is hidden.

### To Set Hop Frequency

The range of the hop frequency depends on the carrier frequency currently selected. Press Hop Freq to highlight the parameter, and then use the numeric keyboard or arrow keys and knob to input the desired value.

- Sine: 1uHz~60MHz
- Square: 1uHz~25MHz
- Ramp: 1uHz~500kHz
- Arb: 1uHz~6MHz

#### Note:

The methods of setting other parameters of FSK are similar to AM. In addition, the external modulating signal of FSK must be Square which complies with the CMOS level specification.

# 2.9.6 ASK

When using ASK (Amplitude Shift Keying), the carrier frequency and key frequency will need to be set. The key frequency is the shift rate of modulated waveform amplitude.

Press  $Mod \rightarrow Type \rightarrow ASK$ , the parameters of ASK modulation are shown in Figure 2-26

CH1:S	ine.ON.HiZ	. Mod	CH2:Si	ine.ON.HiZ	2
		Frequency Amplitude Offset Phase	7 1.000 0 4.000 ∨ 0.000 ∨ 0.00 °	00kHz ípp ídc

	External	The source is external. Use the [Aux In/Out] connector at the rear panel.
Key Freq		Set the frequency at which the output amplitude shifts between the carrier amplitude and zero (internal modulation only): 1mHz~ 50kHz.

Table 2-14 Menu Explanations of the ASK Parameters

#### Note:

The methods for setting the parameters of ASK are similar to AM. In addition, the external modulating signal of ASK must be Square which complies with the CMOS level specification.

# 2.9.7 PSK

When using PSK (Phase Shift Keying), configure the generator to "shift" its output phase between two preset phase values (carrier phase and modulating phase). The default modulating phase is 180°.

Press  $Mod \rightarrow Type \rightarrow PSK$ , the parameters of PSK modulation are shown in Figure 2-27.

CH1:S	ine.ON.HiZ	. Mod	CH2:Si	ine.ON.HiZ	
			Frequency Amplitude Offset Phase	/ 1.000 000kHz 4.000 Vpp 0.000 Vdc 0.00 °

#### SIGLENT

#### Note:

The methods of setting the parameters of PSK are similar to AM. In addition, the external modulating signal of PSK must be Square which complies with the CMOS level specification.
# 2.9.8 PWM

In PWM (Pulse Width Modulation), the pulse width of the pulse varies with the instantaneous voltage of the modulating waveform. The carrier can only be pulse.

Press Waveforms  $\rightarrow$  Pulse  $\rightarrow$  Mod, the parameters of PWM modulation are shown in Figure 2-28.

*CH1:P	ulse.ON.Hii	Z Mod	CH2:Sine.ON.HiZ		
			Frequency Amplitude Offset Duty Rise Edge	<ul> <li>4.000 00</li> <li>4.000 V)</li> <li>0.000 V)</li> <li>20.000 %</li> <li>16.8ns</li> </ul>	00kHz op dc %
PWM Free	PWM Freq 100.000 000 Hz			0.000 00	)0 s
Duty Dev 19.0 %			Load Output	ON	<b>8</b> 8

	DnRamp	

Table 2-16 Menu Explanations of the PWM Parameter	rs
---	----

	Noise	
	Arb	
PWM Freq		Set the modulating waveform frequency. Frequency range: 1mHz~ 20kHz (internal source only).

#### To Set Pulse Width/Duty Deviation

Width Deviation represents the variation of the modulated waveform pulse width relative to the original pulse width. Press Width Dev to highlight the parameter, and use the numeric keyboard or arrow keys and knob to input the desired value, as shown in the Figure 2-29.

Figure 2-29 Width Deviation Setting Interface

- The width deviation cannot exceed the current pulse width.
- The width deviation is limited by the minimum pulse width and current edge time setting.

Duty Deviation represents the variation (%) of the modulated waveform duty relative to the original duty. Press Duty Dev to highlight the parameter, and then use the numeric keyboard or arrow keys and knob to input the desired value, as shown in the Figure 2-30.

ົ CH1:Pເ	ulse.ON.HiZ	. Mod	CH2:Si	ne.ON.HiZ	
			Frequency Amplitude Offset Duty Rise Edge	<ul> <li>1.000 00</li> <li>4.000 V)</li> <li>0.000 V)</li> <li>20.000 %</li> <li>8.4ns</li> </ul>	00kHz op dc %
PWM Free	q 100.000	) 000 Hz	Delay	0.000 00	)0 s
Duty Dev	1 <mark>9</mark> .0 %		Load	HiZ	
			Output	ON	문문
Туре	Source	Duty	Shape	PWM	
PWM	Internal	Dev	Sine	Freq	

Figure 2-30 Duty Deviation Setting Interface

- The duty deviation cannot exceed the current pulse duty cycle.
- The duty deviation is limited by the minimum duty cycle and current edge time setting.
- Duty deviation and width deviation are correlative. Once a parameter is changed, the other will be automatically changed.

#### Note:

The methods of setting other parameters of PWM are similar to AM.

# 2.10 To Set Sweep Function

In the sweep mode, the generator steps from the start frequency to the stop frequency in the sweep time specified by the user. The waveforms that support sweep include sine, square, ramp and arbitrary.

Press Sweep key to enter the following menu. Set the waveform parameters by using the operation menu.

CH1:S	ine.ON.HiZ	Sweep	CH2:Sine.ON.HiZ		
A A A A A A A A A A A A A A A A A A A			Frequency Amplitude Offset Phase	<ul> <li>1.000 00</li> <li>4.000 Vi</li> <li>0.000 Vi</li> <li>0.000 °</li> </ul>	00kHz op dc

### **Sweep Frequency**

Use start freq and stop freq or center freq and freq span to set the range of the frequency sweep. Press the key again to switch between the two sweep range modes.

#### Start Frequency and Stop Frequency

Start Frequency and Stop Frequency are the lower and upper limits of the frequency for sweep. Start Frequency  $\leq$  Stop Frequency.

#### SIGLENT

- Choose Direction → Up, the generator will sweep from Start frequency to Stop frequency.
- Choose Direction → Down, the generator will sweep from Stop frequency to Start frequency.

#### **Center Frequency and Frequency Span**

Center Frequency = (|Start Frequency + Stop Frequency|)/2 Frequency Span = Stop Frequency – Start Frequency

#### Sweep Type

SDG1000X provides "Linear" and "Log" sweep profiles and the default is "Linear".

#### Linear Sweep

In linear sweep, the output frequency of the instrument varies linearly in the way of "a number of Hertz per second". Choose  $\boxed{\text{Sweep}} \rightarrow \text{Page 1/2} \rightarrow \text{Type}$  $\rightarrow$  Linear, there is a straight line displayed on the waveform on the screen, indicating that the output frequency varies linearly.

CH1:S	ine.ON.HiZ	Sweep	CH2:Sine.ON.HiZ		
			Frequency Amplitude Offset Phase	/ 1.000 0 4.000 ∨ 0.000 ∨ 0.00 °	00kHz pp dc

Туре	Direction				Page
Linear	Up				2/2 🕨

Figure 2-33 Linear Sweep Interface

## Log Sweep

In log sweep, the output frequency of the instrument varies in a logarithmic fashion, that is, the output frequency changes in the way of "decade per second". Choose  $\boxed{\text{Sweep}} \rightarrow \boxed{\text{Page 1/2}} \rightarrow \boxed{\text{Type}} \rightarrow \boxed{\text{Log}}$ , there is an exponential function curve displayed on the waveform on the screen, indicating that the output frequency changes in a logarithmic mode.

Туре	Direction				Page	
Log	Up				2/2 🕨	

Figure 2-34 Log Sweep Interface

## Sweep Trigger Source

The sweep trigger source can be internal, external or manual. The generator will generate a sweep output when a trigger signal is received and then wait for the next trigger source.

## 1. Internal Trigger

Choose Source  $\rightarrow$  Internal, the generator outputs continuous sweep waveform when internal trigger is selected. The default is "Internal". Choose Trig Out  $\rightarrow$  On, the [Aux In/Out] connector at the rear panel will output the trigger signal.

## 2. External Trigger

Choose Source  $\rightarrow$  External, the generator accepts the trigger signal inputted

## SIGLENT

from the [Aux In/Out] connector at the rear panel when external trigger is selected. A sweep will be generated once the connector receives a CMOS pulse with specified polarity. To set the CMOS pulse polarity, choose Edge to select "Up" or "Down".

## 3. Manual Trigger

Choose Source  $\rightarrow$  Manual, a sweep will be generated from the corresponding channel when the Trigger softkey is pressed when manual trigger is selected. Choose Trig Out  $\rightarrow$  On, the [Aux In/Out] connector at the rear panel will output the trigger signal.

# 2.11 To Set Burst Function

The Burst function can generate versatile waveforms in n this mode. Burst times can last a specific number of waveform cycles (N-Cycle mode), or when an external gated signals (Gated mode) is applied. Any waveform (except DC) may be used as the carrier, but noise can only be used in Gated mode.

#### Burst Type

SDG1000X provides three burst types including N-Cycle, Infinite and Gated. The default is N-Cycle.

Burst Type	Trigger Source	Carrier
N-Cycle	Internal/External/ Manual	Sine, Square, Ramp, Pulse, Arbitrary.
Infinite	External/Manual	Sine, Square, Ramp, Pulse, Arbitrary.
Gated	Internal/External	Sine, Square, Ramp, Pulse, Noise, Arbitrary.

Table 2-19 Relations among burst type, trigger source and carrier

## N-Cycle

In N-Cycle mode, the generator will output waveform with a specified number of cycles after receiving the trigger signal. Waveforms that support N-Cycle burst include sine, square, ramp, pulse and arbitrary.

Press  $Burst \rightarrow NCycle \rightarrow Cycles$ , and use the numeric keyboard or arrow keys and knob to input the desired cycles. Set the waveform parameters by using the operation menu, as shown in Figure 2-35 and Figure 2-36.

*CH1:Sine.ON.HiZ Burst			CH2:Sine.ON.HiZ		
		Frequency Amplitude Offset Phase	1.000 00 4.000 V) 0.000 V¢ 0.00 °	)OkHz op dc

	On	Enable trigger out.
Page 2/2		Return to the previous page.

#### Infinite

In infinite mode, the cycle number of the waveform is set as an infinite value. The generator outputs a continuous waveform after receiving the trigger signal. Waveforms that support infinite mode include sine, square, ramp, pulse and arbitrary.

Press  $Burst \rightarrow NCycle \rightarrow Infinite$ , and set the trigger source to "external" or "manual". The screen will display an infinite cycle burst, as shown in Figure 2-37.

*CH1:Sine.ON.HiZ Burst			CH2:Si	ine.ON.HiZ	
			Frequency Amplitude Offset Phase	<ul> <li>1.000 00</li> <li>4.000 ∨r</li> <li>0.000 ∨r</li> <li>0.000 °</li> </ul>	00kHz op dc

Cycles			Load	HiZ	
			Output	ON	ि 🔓
NCycle	Cycles	Start		Source	Page
Gated	Infinite	Phase		External	1/2 🕨

Figure 2-37 Infinite Burst Interface

#### Gated

In gated mode, the generator controls the waveform output according to the gate signal level. When the gated signal is "true", the generator outputs a continuous waveform. When the gated signal is "false", the generator first completes the output of the current period and then stops. Waveforms that support gated burst include sine, square, ramp, pulse, noise and arbitrary.

Press Burst  $\rightarrow$  Gated, to enter the following interface.

*CH1:Sine.ON.HiZ Burst			CH2:Si	ine.ON.HiZ	
		Frequency Amplitude Offset Phase	<ul> <li>1.000 00</li> <li>4.000 Vi</li> <li>0.000 Vi</li> <li>0.000 °</li> </ul>	)OkHz op dc	
Start Phas	Start Phase <mark>0</mark> .00 °				
Polarity	Negativ	ve	Load	HiZ	
Burst Period 10.000 000ms		Output	ON	<b>e</b> 5

Function Menu	Settings	Explanation		
Gated		Use the gated mode.		
Delority	Positive	Set the polarity for the geted signal		
Polarity	Negative	Set the polarity for the gated signal.		
Start Phase		Set the start phase of the burst.		
Burst Period		Set the burst Period.		
	Internal	Choose internal source as a trigger.		
Source	External	Choose external source as a trigger. Use the [Aux In/Out] connector at the rear panel.		

Table 2-22	Menu	Explanations	of the	Gated	Burst
	wichia	Explanations		Outou	Durot

#### **Start Phase**

Define the start point in a waveform. The phase varies from 0° to 360°, and the default setting is 0°. For an Arbitrary Waveform, 0° is the first waveform point.

#### **Burst Period**

Burst Period is only available when the trigger source is internal. It is defined as the time from the start of a burst to the start of the next one. Choose **Burst Period** and use the numeric keyboard or arrow keys and knob to input the desired value.

- Burst Period  $\geq$  0.99µs + carrier period × burst number
- If the current burst period set is too short, the generator will increase this value automatically to allow outputting the specified number of cycles.

#### Cycles/Infinite

Set the number of waveform cycle in an N-Cycle (1 to 50,000 or Infinite). If Infinite is chosen, then a continuous waveform will be generated once a trigger occurs.

### SIGLENT

#### Delay

Set the time delay between the trigger input and the start of the N-Cycle burst.

### **Burst Trigger Source**

The burst trigger source can be internal, external or manual. The generator will generate a burst output when a trigger signal is received and then wait for the next trigger source.

### 1. Internal Trigger

Choose Source  $\rightarrow$  Internal, the generator outputs continuous burst waveform when internal trigger is selected. Choose Trig Out as "Up" or "Down", the [Aux In/Out] connector at the rear panel will output a trigger signal with specified edge.

### 2. External Trigger

Choose Source  $\rightarrow$  External, the generator accepts the trigger signal inputted from the [Aux In/Out] connector at the rear panel when external trigger is selected. A burst will be generated once the connector gets a CMOS pulse with specified polarity. To set the CMOS pulse polarity, choose Edge to select "Up" or "Down".

#### 3. Manual Trigger

Choose Source  $\rightarrow$  Manual, a burst will be generated from the corresponding channel when the Trigger softkey is pressed when manual trigger is selected.

# 2.12 To Store and Recall

SDG1000X can store the current instrument state and user-defined arbitrary waveform data in internal or external memory and recall them when needed. Press Store/Recall to enter the following interface.

Addr(C)∥ <b>/</b> L	ocal				
🗢 Local(C	2:)				
🗎 STAT	E01.xml				
File Type	Save	Browse	Recall	Delete	Page
State					1/2 🕨

Cancel		Exit the Store/Recall interface.
Page 2/2		Return to the previous page.

# 2.12.1 Storage System

The SDG1000X provides an internal non-volatile memory (C Disk) and a USB Host interface for external memory.

## 1. Local (C:)

Users can store instrument states and arbitrary waveform files to C Disk.

## 2. USB Device (0:)

There is a USB Host interface located on the left side of the front panel which permits users to store/recall waveforms or update the firmware version by U-Disk. When the generator detects a USB storage device, the screen will show the drive letter "USB Device (0:)" and display a prompt message "USB device connected.", as shown in Figure 2-41. After removing the U-Disk, the screen will display a prompt message "USB device removed." And "USB Device (0:)" in the storage menu will disappear.

Figure 2-41 Storage System

### Note:

The SDG1000X can only identify files of which filenames consist of English letters, number and underscore. If other characters are used, the name may be displayed in the store and recall interface abnormally.

## Browse

- Use the knob to shift between the directories to choose Local (C:) or USB
   Device (0:). Choose Browse, press the knob to open the current directory.
- Use the knob to switch between folder and files under the current directory. Choose Browse, press the knob to open the subdirectory. Choose <up>, then choose Brower or press the knob to return to the upper level directory.

# 2.12.2 File Type

Choose Store/Recall  $\rightarrow$  File Type to select the desired file type. Available file types are State File and Data File.

### State File

Store the instrument state in internal or external memory in "\*.xml" format. The state file stored includes waveform parameters and modulation, sweep, burst parameters of two channels and utility parameters.

## Data File

The SDG1000X can recall the data files in "\*.csv" or "\*.dat" format from the external memory and transfer them into "\*.bin" format then store them in the internal memory. When it is done, the generator will enter the arbitrary waveform interface automatically.

In addition, users can edit arbitrary waveforms with PC software — EasyWave, download them to the internal memory through remote interface and store them (in "\*.bin" format) in the internal memory.

# 2.12.3 File Operation

## To Save the Instrument State

Users can store the current instrument state in internal and external memories. The storage will save the selected function (including the basic waveform parameters, modulation parameters and other utility settings used.)

To save the instrument state, the procedures are given as followed:

#### 1. Choose the file type to store.

Press Store/Recall  $\rightarrow$  File Type  $\rightarrow$  State, and choose state as the storage type.

#### 2. Choose the location of the file.

Choose a desired location by rotating the knob.

#### 3. Name the file.

Press Save, to enter the following interface.

Please input a valid file name.												
File Name: STATE01												
0	1	2	3	4	5	6	7	8	9	_	-	
A	В	С	D	Ε	F	G	Η	Ι	J	K	L	Μ
NOPQRSTUVWXYZ												
U	Up Down Select Delete Save Cancel											

Figure 2-42 Filename Input Interface

Function Menu	Settings	Explanation
Up		Cursor upward to select.
Down		Cursor downward to select.
Select		Select the current character.
Delete		Delete the current character.
Save		Store the file with the current name.
Cancel		Return to the store/Recall interface.

#### Table 2-25 Menu Explanation of File Storage

#### Select the character

Users can select the desired character from the virtual soft keyboard by using the knob or Up and Down menus. Then choose Select to display the character selected in the filename area.

#### Delete the character

Use the left and right arrow keys to move the cursor in the file name. Then choose Delete to delete the corresponding character.

## 4. Save the file.

After finishing inputting filename, press Save. The generator will save the file under the currently selected directory with the specified filename.

## To Recall State File or Data File

To recall the instrument state or arbitrary waveform data, the procedures are as follows:

## 1. Choose the file type.

Press Store/Recall  $\rightarrow$  File Type, and choose state or data as the storage type.

## 2. Choose the file to be recalled.

Rotate the knob to select the file you want to recall.

#### 3. Recall the file.

Choose Recall, press the knob, the generator will recall the selected file and display corresponding prompt message when the file is read successfully.

## To Delete File

To delete the instrument state or arbitrary waveform data, the procedures are as follows:

#### 1. Choose the file.

Rotate the knob to select the file you want to delete.

### 2. Delete the file.

Choose Delete, the generator will display prompt message 'Delete the file?' Then press Accept, the generator will delete the currently selected file.

## To Copy and Paste File

SDG1000X supports the internal and external storage to copy files from each other. For example, copy an arbitrary wave file in the U-disk to the instrument, the procedure is as follows:

#### 1. Choose the file type.

Press Store/Recall  $\rightarrow$  File Type, and choose "Data" as the storage type.

## 2. Choose the file to be copied.

Rotate the knob to select USB Device (0:) and press the knob to open its directory. Then rotate the knob to select the file you want to copy and press Page  $1/2 \rightarrow Copy$ .

## 3. Paste the file.

Rotate the knob to select Local (C:) and press the knob to open its directory. Then press Paste.

# 2.13 To Set Utility Function

With the Utility function, the user can set the parameters of the generator such as Sync, Interface, System Setting, Self Test and Frequency Counter, etc. Press Utility to enter the utility menu, as shown in Figure 2-43 and Figure 2-44.

CH1:S	ine.ON.HiZ		CH2:Sine.ON.HiZ			
		<b></b> *	Frequency Amplitude Offset Phase	<ul> <li>1.000 00</li> <li>4.000 ∨r</li> <li>0.000 ∨r</li> <li>0.000 °</li> </ul>	00kHz op dc

According to the different choices of the decimal point and the separator, the format can have various forms.

## 2. Language Setup

The generator offers two languages (English and Simplified Chinese). Press  $\boxed{\text{Utility}} \rightarrow \text{System} \rightarrow \text{Language}$ , to select the desired language. This setting is stored in non-volatile memory and will not be influenced by the Set To Default operation.

### **English Interface**

*CH1:Sine.ON.HiZ			CH2:Sine.ON.HiZ			
		Frequency Amplitude Offset Phase	<ul> <li>1.000,00</li> <li>4.000 Vi</li> <li>0.000 Vi</li> <li>0.000 °</li> </ul>	00kHz op dc		
			Load Output	HiZ ON	· · · · ·	
Number Format	Language English	PowerOn Default	Set To Default	Beeper On	Page 1/2 ►	

Figure 2-48 English Interface

#### **Chinese Interface**

Figure 2-49 Chinese Interface

#### 3. Power On

Choose the SDG1000X's setting when the generator is powered on. Two choices are available: the default setting and the last settings set when the unit was last powered down. Once selected, the setting will be applied when the instrument is powered on. This setting is stored in non-volatile memory and will not be influenced by the Set To Default operation.

- Last: includes all system parameters and states, except channel output state.
- Default: denotes the factory defaults except certain parameters (such as Language).

### 4. Set to Default

Press  $Utility \rightarrow System \rightarrow Set$  To Default, to set the system to the default setting. The default settings of the system are as followed:

Output	Default
Function	Sine Wave
Frequency	1kHz
Amplitude/Offset	4Vpp/0Vdc
Phase	0°
Load	High Z

Source	Internal

#### 5. Beeper

Enable or disable the beeper. Press  $\boxed{\text{Utility}} \rightarrow \text{System} \rightarrow \text{Beeper}$  to select "On" or "Off" and the default is "On".

### 6. Screen Saver

Enable or disable screen saver. Press Utility  $\rightarrow$  System  $\rightarrow$  Page 1/2  $\rightarrow$  ScrnSvr to select "On" or "Off" and the default is "Off". Screen saver will be on if no action is taken within the time that you have selected. Press any key to resume.

#### 7. System Info

Select the System Info option of the utility menu to view the generator's system information, including startup times, software version, hardware version, model and serial number.

Startup Times:57Software Version:1.01.01.20Hardware Version:02-00-00-11-00Product Type:SDG1062XSerial No:SDGY0123456786Please press any function key to exit !

Figure 2-50 System Information Interface

#### 8. Update

The software version and configuration file of the generator can be updated directly via U-disk. Follow the steps below:

- Insert U-disk with firmware update file (\*.ADS) and configuration file (\*.CFG) to USB host interface on the front panel of the generator.
- Press Utility → Page 1/2 → Firmware Update. Or press Store/Recall directly.
- 3. Select the firmware file (\*.ADS) and choose Recall to update the system software.
- 4. After the updating is finished, the generator will restart automatically.
- 5. Press Utility  $\rightarrow$  Page 1/2  $\rightarrow$  Firmware Update. Or press Store/Recall directly.
- 6. Select the configuration file (\*.CFG) and choose Recall to update the configuration file.
- 7. After the updating is finished, the generator will restart automatically.

#### Note:

1. Don't cut off the power during the generator is being updated!

2. A configuration file (\*.CFG) may or may not be included with a given firmware update. If a CFG file is not included with a firmware update then it will not be required for that update.

### 9. Built-in Help System

The SDG1000X provides a built-in help system, by which users can view the help information at any time when operating the instrument. Press  $Utility \rightarrow$  System  $\rightarrow$  Page 1/2  $\rightarrow$  Help to enter the following interface.

Highlight a topic and press "Select".					
1. System inf	formatio	n.			
2. Generating	g a stanc	lard wavef	orm.		
3. Generating	g an arbi	trary wave	form.		
4. Generating	g a modu	ulated wave	eform.

Table	2 0 7	monu		Janation	5 01	OCI	1001

Function Menu	Settings	Explain
ScrTest		Run screen test program.
KeyTest		Run keyboard test program.
LEDTest		Run key indicator lights test program.
BoardTest		Run hardware circuit self-test program.
Cancel		Return to the Test/Cal menu.

## 1. ScrTest

Select ScrTest to enter the screen test interface. The prompt message 'Please press '7' key to continue, press '8' key to exit.' is displayed. Press the '7' key for test and observe if there is any serious color deviation, bad pixel or display error.

Figure 2-54 Screen Test Interface

#### 2. Key Test

Select KeyTest to enter the keyboard test interface, the on-screen white rectangle shapes represent the front panel keys. The circle between two arrows represents the knob. Test all keys and knob and also verify that all the backlight keys illuminate correctly.

Figure 2-55 Key Test Interface

The corresponding area of tested keys or knob would display in blue color. The top of the screen displays 'Please press '8' key three times to exit.'

#### 3. LED Test

Select LEDTest to enter the LED test interface, the on-screen white rectangle

shapes represent the front panel keys. The prompt message 'Please press '7' Key to continue, press '8' Key to exit.' is displayed. Press the '7' key continuously for testing and when a key is lighted, the corresponding area on the screen will display in blue color.

Figure 2-56 LED Test Interface

### 4. Board Test

Select BoardTest to enter the following interface.

Figure 2-57 Board Test Interface
# 2.13.3 Frequency Counter

The SDG1000X provides a frequency counter which could measure frequencies between 100mHz to 200MHz. The dual channels can still output normally when the counter is enabled. Press  $\boxed{\text{Utility}} \rightarrow \boxed{\text{Counter}}$ , to enter the following interface.

Counter:OFF						
Value Mean Min Max Sdev Num	Fr 0.0 0.0 0.0 0.0	equency 000 000 0 Hz 000 000 0 Hz 000 000 0 Hz 000 000 0 Hz 000 000 0 Hz	Pwidth 0.000 000 s 0.000 000 s 0.000 000 s 0.000 000 s 0.000 000 s 0.000 000 s	Duty 0.0 % 0.0 % 0.0 % 0.0 % 0.0 % 0.0 % 0	Freq Dev 0.000ppn 0.000ppn 0.000ppn 0.000ppn 0.000ppn 0	/ n n n n

Sidle	On	Close the counter.
Frequency		Measured frequency.
Period		Measured period.
PWidth		Measured positive width.
NWidth		Measured negative width.
RefFreq		Set the reference frequency. System will calculate the deviation between the measured frequency and the reference frequency automatically.
TrigLev		Set the trigger level voltage.
Duty		Measured duty.
Setup		Set the counter configuration.
Clear		Clear the statistic data.

#### Table 2-35 Menu Explanations of Frequency Counter

Counter:OFF						
Value Mean Min Max Sdev Num	Frequency 0.000 000 0 0.000 000 0 0.000 000 0 0.000 000	Pwidth Hz 0.000 000 Hz 0.000 000 Hz 0.000 000 Hz 0.000 000 Hz 0.000 000 O	Duty s 0.0 % s 0.0 % s 0.0 % s 0.0 % s 0.0 % o	Freq Dev 0.000ppm 0.000ppm 0.000ppm 0.000ppm 0.000ppm 0.000ppm		
Ref Freq 10.000 000MHz						
Mode AC	HFR Off	Default			Accept	

Figure 2-59 Counter Setup Interface

Function Menu	Settings	Explanation
Mode	DC	Set the coupling mode to DC
MODE	AC	Set the coupling mode to AC
	On	Open the high frequency rejection filter.
	Off	Close the high frequency rejection filter.
Default		Set the frequency counter settings to default.
Accept		Save the current settings and return to the previous menu.

#### Table 2-36 Menu Explanations of Setup

#### 1. To Select the Parameters to be measured

The frequency counter on the SDG1000X can measure parameters including frequency, period, duty, positive pulse width and negative pulse width.

#### 2. Reference Frequency

System will calculate the deviation between the measured frequency and the reference frequency automatically.

#### 3. Trigger Level

Sets the trigger level of the measurement system. The system triggers and obtains the measurement readings when the input signal reaches the

specified trigger level. The default is 0V and the available range is from -3V to 1.5V. Choose TrigLev and use the numeric keyboard to input the desired value and select the unit (V or mV) from the pop-up menu. Or use the knob and arrow keys to change the parameter value.

### 4. Coupling Mode

Sets the coupling model of the input signal to "AC" or "DC". The default is "AC".

### 5. HFR

High Frequency Rejection can be used to filter out the high-frequency components of a measured signal and improve the measurement accuracy in low-frequency signal measurement. Press **HFR** to enable or disable this function. The default is "Off".

- Enable High Frequency Rejection when low-frequency signal with lower than a 250kHz frequency is measured to filter out the high-frequency noise interference.
- Disable High Frequency Rejection when a signal with a frequency higher than 250 KHz is measured. The maximum frequency that can be counted is 200 MHz.

# 2.13.4 Output

*CH1:Sine.ON.HiZ			CH2:Sine.ON.HiZ			
			Frequency Amplitude Offset Phase	7 1.000 00 4.000 ∨ 0.000 ∨ 0.00 °	1.000 000kHz 4.000 Vpp 0.000 Vdc 0.00 °	
			Load Output	HiZ ON	6 문문	
Load	Polarity Normal	EqPhase	Wave Combine		Accept	

Press Utility  $\rightarrow$  Output to enter the following interface.

#### Load

For the [CH1] and [CH2] connectors on the front panel, the generator has an output impedance of  $50\Omega$ . If the actual load does not match the source impedance, the displayed voltage will not be the same as the output voltage setting on the generator. This function is used to match the displayed voltage with the expected one. This setting does not actually change the output impedance to any other value.

#### Steps for setting the load:

Press  $Utility \rightarrow Output Setup \rightarrow Load$ , to set the output load. The load parameter shown on the down bottom is the default setting when the power is on or the pre-set load value.

High Impedance: displayed as HiZ;

Load: the default is  $50\Omega$  and the range is  $50\Omega$  to  $100k\Omega$ .

Figure 2-60 Output Setup Interface

#### Note:

Continue pressing the corresponding output key for two second to switch between High Impedance and  $50\Omega$ .

### Polarity

Press  $\boxed{\text{Utility}} \rightarrow \boxed{\text{Output Setup}} \rightarrow \boxed{\text{Polarity}}$  to set the output signal as normal or inverted. The waveform's inversion is relative to the offset voltage, as shown in the following figure.

### Note:

The Sync signal related to the waveform is not inverted when the waveform is inverted.

### EqPhase

Press  $Utility \rightarrow Output Setup \rightarrow EqPhase$  to align the phases of CH1 and CH2. Choosing the menu will re-configure two channels and enable the generator to output with specified frequency and start phase. For two signals whose frequencies are the same or a multiple thereof, this operation will align their phases.

### Waveforms Combining

The CH1 output port of the SDG1000X outputs the waveform of CH1 in the general mode, while the waveform of CH1+CH2 can be output in the combined mode. Similarly, the CH2 output port of SDG1000X outputs the

waveform of CH2 in the general mode while the waveform of CH1+CH2 can be output in the combined mode.

Press Utility  $\rightarrow$  Output Setup  $\rightarrow$  Wave Combine to enter the waveforms combining interface, as shown in the following figure.

Figure 2-61 Waveforms Combining Interface

Table 2-37	Menu	Explanations	of Wave	Combine
				•••••••

Function Menu	Settings	Explanation
CH1 Switch	CH1	Output the waveform of CH1.
	CH1+CH2	Output the waveform of CH1+CH2.
CH2 Switch	CH2	Output the waveform of CH2.
	CH1+CH2	Output the waveform of CH1+CH2.
Return		Save the current operation and exit the current interface.

#### Note:

- 1. The square waveform function of the SDG1000X can only serve as an independent channel. Combining with a Square waveform is not possible.
- 2. When the waveforms combining function is enabled, the load of two channels will be set to the same automatically, default using the load value of the currently operated channel.

# 2.13.5 CH Copy/Coupling

### **Channel Copy**

The SDG1000X supports state and waveform copy function between its two channels. That is to say, it copies all parameters and states (including the channel output state) and arbitrary waveform data of one channel to the other one.

Press Utility  $\rightarrow$  CH Copy Coupling  $\rightarrow$  Channel Copy, to enter the following interface.

CH1:S	*CH1:Sine.ON.HiZ			CH2:Sine.ON.HiZ			
		<b></b> *	Frequency Amplitude Offset Phase	<ul> <li>1.000 00</li> <li>4.000 Vi</li> <li>0.000 Vi</li> <li>0.000 °</li> </ul>	)OkHz op dc

Function Menu	Settings	Explanation
CH1=>CH2		Copy all parameters and states of CH1 to CH2.
CH2=>CH1		Copy all parameters and states of CH2 to CH1.
Accept		Perform the current selection and return to the Utility menu.
Cancel		Give up the current selection and return to the Utility menu.

Note:

#### SIGLENT

Channel coupling or track function and channel copy function are mutually exclusive. When channel coupling or track function is enabled, the menu Channel Copy is hidden.

#### **Channel Coupling**

The SDG1000X supports frequency, amplitude and phase coupling. Users can set the frequency deviation/ratio, amplitude deviation/ratio or phase deviation /ratio of the two channels. When coupling is enabled, CH1 and CH2 can be modified simultaneously. When the frequency, amplitude or phase of one channel (as the reference) is changed, the corresponding parameter of the other channel will be changed automatically and always keeps the specified frequency deviation/ratio, amplitude deviation/ratio or phase deviation /ratio relative to the base channel.

Press Utility  $\rightarrow$  CH Copy Coupling  $\rightarrow$  Channel Coupling, to enter the following interface.

Coupling						
CH2-CH1 FreqDev <mark>0</mark> .000 000 Hz						
CH2-CH1 AmplDev 0.00				Vpp		
сн	I2-CH1 Ph	aseDev	0.00 °	)		
FreqCoup	FreqMode	AmplCoup	AmplMode	PhaseCoup	PhaseMode	
Off	Deviation	Off	Deviation	Off	Deviation	

Figure 2-63 Channel Coupling Interface

### **Frequency Coupling**

1. To Enable Frequency Coupling Function

Press FreqCoup to turn frequency coupling "On" or "Off". The default is "Off".

2. To Select Frequency Coupling Mode

Press FreqMode to choose "Deviation" or "Ratio", and then use the numeric keyboard or knob and arrow keys to input the desired value.

- Deviation: the frequency deviation between CH1 and CH2. The resulting signal is represented by: FreqCH2-FreqCH1=FreqDev.
- Ratio: the frequency ratio of CH1 and CH2. The resulting signal is represented by: Freq<sub>CH2</sub>/Freq<sub>CH1</sub>=FreqRatio.

## Amplitude Coupling

1. To Enable Amplitude Coupling Function

Press AmplCoup to turn amplitude coupling "On" or "Off". The default is "Off".

2. To Select Amplitude Coupling Mode

Press AmplMode to choose "Deviation" or "Ratio", and then use the numeric keyboard or knob and arrow keys to input the desired value.

- Deviation: the amplitude deviation between CH1 and CH2. The resulting signal is represented by: Ampl<sub>CH2</sub>-Ampl<sub>CH1</sub>=AmplDev.
- Ratio: the amplitude ratio of CH1 and CH2. The resulting signal is represented by: Ampl<sub>CH2</sub>/Ampl<sub>CH1</sub>=AmplRatio.

# Phase Coupling

1. To Enable Phase Coupling Function

Press PhaseCoup to turn phase coupling "On" or "Off". The default is "Off".

2. To Select Phase Coupling Mode

Press PhaseMode to choose "Deviation" or "Ratio", and then use the numeric keyboard or knob and arrow keys to input the desired value.

- Deviation: the phase deviation between CH1 and CH2. The resulting signal is represented by: Phase<sub>CH2</sub>-Phase<sub>CH1</sub>=PhaseDev.
- Ratio: the phase ratio of CH1 and CH2. The resulting signal is represented by: Phase<sub>CH2</sub>/Phase<sub>CH1</sub>=PhaseRatio.

# Key Points:

- 1. Channel coupling is only available when both the waveforms of the two channels are basic waveforms including Sine, Square, Ramp and Arbitrary.
- 2. When the Phase Coupling function is enabled, if the phase of one channel

is changed, the phase of the other channel will be changed accordingly. At this point, aligning phase between the two channels can be achieved without executing the Eqphase operation.

3. Channel coupling and channel function are mutually exclusive. When channel coupling is enabled, the menu Channel Copy is hidden.

### **Channel Track**

When the track function is enabled, by changing the parameters or states of CH1, the corresponding parameters or states of CH2 will be adjusted to the same values or states automatically. At this point, the dual channels can output the same signal.

Choose  $\boxed{\text{Utility}} \rightarrow \text{CH Copy Coupling} \rightarrow \text{Track}$  to enable or disable the track function. When the track function is enabled, channel copy and coupling functions are disabled; the user interface is switched to CH1 and cannot be switched to CH2, as shown in the following figure.

CH1:S	*CH1:Sine.ON.HiZ			CH2:Sine.ON.HiZ			
		/*	Frequency Amplitude Offset Phase	7 1.000 00 4.000 V( 0.000 V 0.00 °	DOkHz pp dc		
			Load Output	HiZ ON	R 문		
Track On			PhaseDev		Cancel		

Figure 2-64 Track Interface

 Press PhaseDev to enter the following interface. Then use the numeric keyboard or knob and arrow keys to input the desired value for the phase deviation between CH1 and CH2. The resulting signal is represented by: Phase<sub>CH2</sub>-Phase<sub>CH1</sub>=PhaseDev.

Figure 2-65 Phase Deviation Interface

# 2.13.6 Remote Interface

The SDG1000X can be controlled remotely via USB, LAN and GPIB (option) interfaces. Users can set the corresponding interface according to their needs.

Press Utility  $\rightarrow$  Page 1/2  $\rightarrow$  Interface to open the following menu. The user can set LAN parameters or GPIB address.

*CH1:Sine.ON.HiZ			CH2:Sine.ON.HiZ		
			Frequency 1.000 000kH Amplitude 4.000 Vpp Offset 0.000 Vdc Phase 0.00 °		00kHz op dc
			Load Output	HiZ ON	<mark>₽</mark> 5 <sup>6</sup> 8
GPIB	LAN State On	LAN Setup		Accept	

Figure 2-66 Interface Settings

Table 2-39 Menu Explanations of Inte
--------------------------------------

Function Menu	Settings	Explanation					Explanation		
GPIB		Set the GPIB address.							
LAN State	On	Turn on LAN.							
LAN Sidle	Off	Turn off LAN.							
LAN Setup		Set the IP address, subnet mask and gateway.							
Accept		Save the current settings and return to the Utility menu.							

The SDG1000X can be controlled remotely via the following two methods:

1. User-defined programming

Users can program and control the instrument by using the SCPI commands

(Standard Commands for Programmable Instruments). For more information about the commands and programming, please refer to "Remote Control Manual".

2. PC software

Users can use the PC software Measurement & Automation Explorer of NI (National Instruments Corporation) to send commands to control the instrument remotely.

### Remote Control via USB

The SDG1000X can communicate with a PC through the USBTMC protocol. You are suggested to do as the following steps.

1. Connect the device.

Connect the USB Device interface at the rear panel of SDG1000X with the PC via a USB cable.

Install the USB driver.
 NI Visa is recommended.

#### 3. Communicate with a remote PC

Open Measurement & Automation Explorer of NI and choose the corresponding resource name. Then click "Open VISA Test Panel" to turn on the remote command control panel through which you can send commands and read data.

### Remote Control via GPIB

Each device connected to GPIB interface must have a unique address. The default value is 18 and values range from 1 to 30. The selected address is stored in non-volatile memory.

1. Connect the device.

Connect the generator to the computer using a USB to GPIB adapter (option). **Note:** 

Please make sure that the PC has a GPIB interface card installed.

Connect the USB terminal of the USB to GPIB adapter to the USB Host interface at the front panel of the generator and the GPIB terminal to the GPIB card terminal of the PC.

2. Install the driver of GPIB card.

Please install the driver for the GPIB card which has been connected to your PC.

3. Set the GPIB address.

Choose  $\boxed{\text{Utility}} \rightarrow \text{Page 1/2} \rightarrow \text{Interface} \rightarrow \text{GPIB}$  to enter the following interface. Users can use the knob, arrow keys or numeric keyboard to change the value and press Accept to save the current setting.

GPIB se	etting:	<b>[</b> 8		
			Accept	Cancel

Figure 2-67 GPIB Setting Interface

#### 4. Communicate with PC remotely

Open Measurement & Automation Explorer of NI. After adding the GPIB device successfully, choose the corresponding resource name. Then click

"Open VISA Test Panel" to turn on the remote command control panel through which you can send commands and read data.

#### **Remote Control via LAN**

The SDG1000X can communicate with a PC through LAN interface. Users can view and modify the LAN parameters.

1. Connect the device.

Connect the generator to your PC or the LAN of your PC using a network cable.

#### 2. Configure network parameters.

Choose  $\boxed{\text{Utility}} \rightarrow \text{Page 1/2} \rightarrow \text{Interface} \rightarrow \text{LAN State}$  to turn on LAN. Then choose LAN Setup to enter the following interface.

	IP Address	s:	<b>1</b> 0	. 11	. 13	, 23		
	Subnet Mask:		255	. 0	. 0	. 0		
	Gateway:		10	. 11	. 13	. 1		
IP Address	Subnet Mask	Def Gate	ault wav	DI	HCP	Acce	ept	Cancel

Figure 2-68 LAN Settings Interface

#### 1) To Set IP Address

The format of IP address is nnn.nnn.nnn. The first nnn ranges from 1 to 223 and the others range from 0 to 255. You are recommended to acquire an available IP address from your network administrator.

#### SIGLENT

Press IP Address and use the arrow keys and numeric keyboard or knob to enter your desired IP address. The setting is stored in non-volatile memory and will be loaded automatically when the generator is powered on at the next time.

#### 2) To Set Subnet Mask

The format of subnet mask is nnn.nnn.nnn and each nnn ranges from 0 to 255. You are recommended to acquire an available subnet mask from your network administrator.

Press Subnet Mask and use the arrow keys and numeric keyboard or knob to enter your desired subnet mask. The setting is stored in non-volatile memory and will be loaded automatically when the generator is powered on at the next time.

#### 3) To Set Gateway

The format of gateway is nnn.nnn.nnn and each nnn ranges from 0 to 255. It is recommended to acquire an available gateway from your network administrator.

Press Gateway and use the arrow keys and numeric keyboard or knob to enter your desired gateway. The setting is stored in non-volatile memory and will be loaded automatically when the generator is powered on at the next time.

#### Note:

- If the generator is connected to the PC directly, set the IP addresses, subnet masks and gateways for both of the PC and generator. The subnet masks and gateways of PC and generator must be the same and the IP addresses of them must be within the same network segment.
- If the generator is connected to the LAN of your PC, please contact with your network administrator to get an available IP address. For details, refer to the TCP/IP protocol.

### 4) DHCP Configuration Mode

In DHCP mode, the DHCP server in the current network assigns LAN parameters, e.g. IP address, for the generator. Press DHCP to select "On" or "Off" to turn DHCP mode on or off. The default is "Off".

### 3. Communicate with PC remotely

Open Measurement & Automation Explorer of NI. After adding the LAN device (VISA TCP/IP Resource...) successfully, choose the corresponding resource name. Then click "Open VISA Test Panel" to turn on the remote command control panel through which you can send commands and read data.

# 2.13.7 Sync Output

The generator provides Sync output through the [Aux In/Out] connector on the rear panel. When the synchronization is on, the port can output a CMOS signal with the same frequency as basic waveforms (except Noise and DC), arbitrary waveforms, and modulated waveforms (except external modulation).

Figure 2-69 Sync Output Interface

Function Menu	Settings	Explanation
Stata	Off	Close the sync output
Sidle	On	Open the sync output
	CH1	Set the sync signal of CH1.
Channel	CH2	Set the sync signal of CH2.
Accept		Save the current settings and return to the Utility menu.
Cancel		Give up the current settings and return to the Utility menu.

#### Table 2-40 Menu Explanations of Sync Output

### Sync Signals of Different Waveforms:

#### **Basic Waveform and Arbitrary Waveform**

1) When the frequency of the waveform is less than or equal to 10MHz, the sync signal is a Pulse with about 50ns pulse width and the same

frequency as the waveform.

- 2) When the frequency of the waveform is greater than 10MHz, there is no sync signal output.
- 3) Noise and DC: there is no sync signal output.

#### **Modulated Waveform**

 When internal modulation is selected, the sync signal is a Pulse with about 50ns pulse width.

For AM, FM, PM and PWM, the frequency of the sync signal is the modulating frequency.

For ASK, FSK and PSK, the frequency of the sync signal is the key frequency.

2) When external modulation is selected, there is no sync signal output, for the [Aux In/Out] connector on the rear panel is used to input external modulating signal.

#### Sweep and Burst Waveform

When Sweep or Burst function is turned on, there is no sync signal output and the Sync menu is hidden.

# 2.13.8 Clock Source

The SDG1000X provides an internal 10MHz clock source. It also can accept external clock source form the [10 MHz In/Out] connector at the rear panel. It can also output the clock source from the [10 MHz In/Out] connector for other devices.

Press Utility  $\rightarrow$  Page 1/2  $\rightarrow$  Clock  $\rightarrow$  Source to select "Internal" or "External" and select "Enable" or "Disable" 10MOut. If "External" is selected, the 10MOut will be set to "Disable" and the instrument will detect whether a valid external clock signal is input from the [10MHz In/Out] connector at the rear panel. If not, the prompt message "No external clock source!" would be displayed and the clock source would be switched to "Internal".

#### Sync methods for two or more instruments:

#### • Synchronization between two instruments

Connect the [10MHz In/Out] connector of generator A (using internal clock) to the [10MHz In/Out] connector of generator B (using external clock) and set the output frequencies of A and B as a same value to achieve synchronization.

#### • Synchronization among multiple instruments

Divide the 10MHz clock source of a generator (using internal clock) into multiple channels, and then connect them to the [10MHz In/Out] connectors of other generators (using External clock), and finally set the output frequencies of all the generators as a same value to achieve synchronization.

# 2.13.9 Mode

Press Utility  $\rightarrow$  Page 1/2  $\rightarrow$  Mode to enter the mode setup Interface, as shown in Figure 2-70 Mode Setup Interface.

Figure 2-70 Mode Setup Interface

#### Phase-locked Mode

When changing the frequency, the DDSs of both channels reset, and the phase deviation between CH1 and CH2 is maintained.

*CH1:Sine.ON.HiZ			CH2:Sine.ON.HiZ			
			Frequency Amplitude Offset Phase	/ <mark>1.000 00</mark> 4.000 √r 0.000 √c 0.00 °	iOkHz op dc	
			Load Output	HiZ ON	물급 이	
Frequency Period	Amplitude HighLevel	Offset LowLevel	Phase	Harmonic Off		

Figure 2-71 Phase-locked Mode

#### Independent Mode

When changing the frequency, neither channels' DDS resets and the phase deviation between CH1 and CH2 changes at random. When the independent mode is enabled, the phase parameter cannot be modified and the menu Phase is hidden, as shown in Figure 2-72.

*CH1:Sine.ON.HiZ			CH2:Sine.ON.HiZ		
			Frequency1.000 000Amplitude4.000 VprOffset0.000 VddPhase		<mark>0kHz</mark> op Ic
			Load Output	HiZ ON	₽₽₽
Frequency Period	Amplitude HighLevel	Offset LowLevel		Harmonic Off	

Figure 2-72 Independent Mode

# 2.13.10 Overvoltage Protection

Choose Utility  $\rightarrow$  Page 1/2  $\rightarrow$  OverVoltage Protection to turn on or off the function, as shown in the following figure.

Figure 2-73 Overvoltage Protection Interface

If the state is set to ON, overvoltage protection of CH1 and CH2 will take effect once any of the following conditions is met. When overvoltage protection occurs, a message will be displayed and the output is disabled.

- The absolute value of input voltage is higher than 11V±0.5V when the amplitude of the generator is higher than or equal to 2Vpp or the DC offset is higher than or equal to |3VDC|.
- The absolute value of input voltage is higher than 4V±0.5V when the amplitude of the generator is lower than 2Vpp or the DC offset is lower than |3VDC|.

# **3 Examples**

To help the user master how to use the SDG1000X more efficiently, we provide some examples in detail. All the examples below use the default setting of the instrument except in special cases.

This chapter includes the following topics:

- Example 1: Generate a Sine Waveform
- Example 2: Generate a Square Waveform
- Example 3: Generate a Ramp Waveform
- Example 4: Generate a Pulse Waveform
- Example 5: Generate a Noise
- Example 6: Generate a DC Waveform
- Example 7: Generate a Linear Sweep Waveform
- Example 8: Generate a Burst Waveform
- Example 9: Generate an AM Modulation Waveform
- Example 10: Generate a FM Modulation Waveform
- Example 11: Generate a PM Modulation Waveform
- Example 12: Generate a FSK Modulation Waveform
- Example 13: Generate an ASK Modulation Waveform
- Example 14: Generate a PSK Modulation Waveform
- Example 15: Generate a PWM Modulation Waveform
- Example 16: Generate a DSB-AM Modulation Waveform

# 3.1 Example 1: Generate a Sine Waveform

Generate a sine waveform with 1MHz frequency, 5Vpp amplitude and 1Vdc offset.

- > Steps:
- Set the frequency.
- 1. Press Waveforms  $\rightarrow$  Sine  $\rightarrow$  Frequency/Period and choose Frequency which will display in blue color.
- 2. Input '1' from the keyboard and choose the unit 'MHz'. The frequency is set to 1MHz.
- Set the Amplitude.
- 1. Press Amplitude/HighLevel to choose Amplitude which will display in blue color.
- 2. Input '5' from the keyboard and choose the unit 'Vpp'. The amplitude is set to 5Vpp.
- Set the Offset.
- 1. Press Offset/LowLevel to choose Offset which will display in blue color.
- Input '1' from the keyboard and choose the unit 'Vdc'. The offset is set to 1Vdc.

When the frequency, amplitude and offset are set, the waveform generated is shown in Figure 3-1.

#### SIGLENT

*CH1:Sine.ON.HiZ			CH2:Sine.ON.HiZ		
			Frequency Amplitude Offset Phase	<ul> <li>1.000 00</li> <li>5.000 ∨₁</li> <li>1.000 ∨₁</li> <li>0.00 °</li> </ul>	00MHz op dc
			Load Output	HiZ ON	물급 이
Frequency Period	Amplitude HighLevel	Offset LowLevel	Phase	Harmonic Off	

Figure 3-1 Generate a Sine Waveform

# 3.2 Example 2: Generate a Square Waveform

Generate a square waveform with 5kHz frequency, 2Vpp amplitude, 1Vdc offset and 30% duty cycle.

- Steps:
- Set the frequency.
- Press Waveforms → Square → Frequency/Period and choose Frequency which will display in blue color.
- 2. Input '5' from the keyboard and choose the unit 'kHz'. The frequency is set to 5kHz.
- Set the Amplitude.
- 1. Press Amplitude/HighLevel to choose Amplitude which will display in blue color.
- 2. Input '2' from the keyboard and choose the unit 'Vpp'. The amplitude is set to 2Vpp.
- Set the Offset.
- 1. Press Offset/LowLevel to choose Offset which will display in blue color.
- Input '1' from the keyboard and choose the unit 'Vdc'. The offset is set to 1Vdc.
- Set the DutyCycle.
- 1. Press DutyCycle to choose DutyCycle which will display in blue color.
- Input '30' from the keyboard and choose the unit '%'. The duty is set to 30%.

When the frequency, amplitude, offset and duty cycle are set, the waveform generated is shown in Figure 3-2.

*CH1:Square.ON.HiZ			CH2:Sine.ON.HiZ		
			Frequency5.000 000kHzAmplitude2.000 VppOffset1.000 VdcPhase0.00 °Duty30.000 %		DOkHz op dc %
			Load Output	HiZ ON	· 문문
Frequency Period	Amplitude HighLevel	Offset LowLevel	Phase	DutyCycle	

Figure 3-2 Generate a Square Waveform

# 3.3 Example 3: Generate a Ramp Waveform

Generate a ramp waveform with 10µs period, 100mVpp amplitude, 20mVdc offset, 45° phase and 30% symmetry.

- > Steps:
- Set the Period.
- Press Waveforms → Ramp → Frequency/Period and choose Period which will display in blue color.
- 2. Input '10' from the keyboard and choose the unit ' $\mu$ s'. The period is set to 10 $\mu$ s.
- Set the Amplitude.
- 1. Press Amplitude/HighLevel to choose Amplitude which will display in blue color.
- Input '100' from the keyboard and choose the unit 'mVpp'. The amplitude is set to 100mVpp.
- Set the Offset.
- 1. Press Offset/LowLevel to choose Offset which will display in blue color.
- Input '20' from the keyboard and choose the unit 'mVdc'. The offset is set to 20mVdc.
- Set the Phase.
- 1. Press Phase to choose Phase which will display in blue color.
- Input '45' from the keyboard and choose the unit '°'. The phase is set to 45°.
- Set the Symmetry.
- 1. Press Symmetry to choose Symmetry which will display in blue color.
- 2. Input '30' from the keyboard and choose the unit '30%'. The symmetry is set to 30%.

When the period, amplitude, offset, phase and symmetry are set, the waveform generated is shown in Figure 3-3.

*CH1:Ramp.ON.HiZ			CH2:Sine.ON.HiZ			
			Period Amplitude Offset Phase Symmetry	10.000u 100.0m\ 20.0mVo 45.00 ° <b>30.0 %</b>	s /pp dc

Frequency	Amplitude	Offset	Phase	Symmetry		
Period	HighLevel	LowLevel	1 11000	elimon1		

Figure 3-3 Generate a Ramp Waveform

# 3.4 Example 4: Generate a Pulse Waveform

Generate a pulse waveform with 5kHz frequency, 5V high level, -1V low level, 40µs pulse width and 20ns delay.

- > Steps:
- Set the Frequency.
- Press Waveforms → Pulse → Frequency/Period and choose Frequency, which will display in blue color.
- 2. Input '5' from the keyboard and choose the unit 'kHz'. The frequency is set to 5 kHz.
- Set the HighLevel.
- 1. Press Amplitude/HighLevel and choose the HighLevel which will display in blue color.
- Input '5' from the keyboard and choose the unit 'V'. The high level is set to 5V.
- Set the LowLevel.
- 1. Press Offset/LowLevel and choose the LowLevel which will display in blue color.
- Input '-1' from the keyboard and choose the unit 'V'. The low level is set to -1V.
- Set the PulWidth.
- 1. Press PulWidth/DutyCycle and choose PulWidth which will display in blue color.
- Input '40' from the keyboard and choose the unit 'µs'. The pulse width is set to 40µs.
- Set the Delay.
- 1. Press Delay to choose Delay which will display in blue color.

2. Input '20' from the keyboard and choose the unit 'ns'. The delay is set to 20ns.

When the frequency, high level, low level, pulse width and delay are set, the waveform generated is shown in Figure 3-4.

*CH1:Pulse.ON.HiZ CH2:Sine.ON.HiZ					
			Frequency HighLevel LowLevel Pulse Widt	5.000 000kHz 5.000 ∨ -1.000 ∨ 40.000us

Figure 3-4 Generate a Pulse Waveform

# 3.5 Example 5: Generate a Noise

Generate a noise with 0.5V stdev and 1 V mean.

#### > Steps:

- Set the Stdev.
- Press Waveforms → Noise → Stdev to choose Stdev which will display in blue color.
- Input '0.5' from the keyboard and choose the unit 'V'. The stdev is set to 0.5 V.
- Set the Mean.
- 1. Press Mean to choose Mean which will display in blue color.
- 2. Input '1' from the keyboard and choose the unit '1'. The mean is set to 1V.

When the stdev and mean are set, the noise generated is shown in Figure 3-5.

*CH1:Noise.ON.HiZ			CH2:Sine.ON.HiZ		
			Stdev Mean	500.0mV 1 <mark>.000 ∨</mark>	
			Load Output	HiZ ON	
	Stdev	Mean			

Figure 3-5 Generate a Noise

# 3.6 Example 6: Generate a DC Waveform

Generate a DC waveform with 3Vdc offset,

#### > Steps:

- Choose the DC waveform.
- 1. Press Waveforms  $\rightarrow$  Page 1/2 $\rightarrow$  DC, to choose the DC waveform.
- Set the Offset.
- 1. Press Offset and choose Offset which will display in blue color.
- Input '3' from the keyboard and choose the unit 'Vdc'. The DC offset is set to 3Vdc.

When the DC offset is set, the waveform generated is shown in Figure 3-6.

*CH1:DC.ON.HiZ			CH2:Sine.ON.HiZ		
		 ∳	DC Offset	<mark>3.000 ∨</mark>	
			Load Output	HiZ ON	
		Offset			

Figure 3-6 Generate a DC Waveform

# 3.7 Example 7: Generate a Linear Sweep Waveform

Generate a sine sweep waveform whose frequency starts at 100Hz and sweeps to a frequency of 10KHz. Use internal trigger mode, linear sweep, and a sweep time of 2s.

- > Steps:
- Set the sweep function.
   Press Waveforms and choose the sine waveform as the sweep function.
   The default setting of the source is internal.
- Set the amplitude and offset.
- 1. Press Amplitude/HighLevel to choose Amplitude which will display in blue color. Input '5' from the keyboard and choose the unit 'Vpp' to set the amplitude to 5Vpp.
- Press Offset/LowLevel to choose Offset which will display in blue color. Input '0' from the keyboard and choose the unit 'Vdc' to set the offset to 0Vdc
- Set the sweep time.
   Press Sweep → Page 1/2 → Sweep Time, input '1' from the keyboard and choose the unit 's' to set the sweep time to 1s.
- Set the start frequency.
   Press StartFreq, input '100' from the keyboard and choose the unit 'Hz' to set the start freq to 100Hz.
- Set the stop frequency.
   Press StopFreq, input '10' from the keyboard and choose the unit 'kHz' to set the stop freq to 10kHz.

• Set the sweep profiles.

Press Type and choose Linear.

When all parameters above are set, the linear sweep waveform generated is shown in Figure 3-7.

Figure 3-7 Generate a Linear Sweep Waveform
## 3.8 Example 8: Generate a Burst Waveform

Generate a burst waveform with 5 cycles. The burst period is 3ms. Use internal trigger and 0° start phase.

- Steps:
- Set the burst function.
   Press Waveforms, and choose the sine waveform as the burst function.
- Set the frequency, amplitude and offset.
- 1. Press Frequency/Period and choose Frequency which will display in blue color. Input '10' from the keyboard and choose the unit 'kHz' to set the frequency to 10kHz.
- 2. Press Amplitude/HighLevel to choose Amplitude which will display in blue color. Input '4' from the keyboard and choose the unit 'Vpp' to set the amplitude to 4Vpp.
- Press Offset/LowLevel to choose Offset which will display in blue color. Input '0' from the keyboard and choose the unit 'Vdc' to set the offset to 0Vdc
- Set the burst mode.
   Press Burst → NCycle, choose N-Cycle Mode. The default setting of the source is internal.
- Set the burst period.
   Press Burst Period, input '3' from the keyboard and choose the unit 'ms' to set the burst period to 3ms.
- Set the start phase.
   Press Start Phase, input '0' from the keyboard and choose the unit '°' to set the start phase to 0°.

• Set the burst cycle.

Press Cycle, Input '5' from the keyboard and choose the unit 'Cycle' to set the burst cycle count to 5.

• Set the delay.

Press Page 1/2 to choose Delay, and input '100' from the keyboard and choose the unit ' $\mu$ s' to set the delay to 100 $\mu$ s.

When all parameters above are set, the waveform generated is shown in Figure 3-8.

*CH1:Sine.ON.HiZ Burst CH2:Sine.ON.HiZ					
•			Frequency Amplitude Offset Phase	4.000 V 4.000 V 0.000 V 0.000 V	00kHz op dc

Figure 3-8 Generate a N-Cycle Burst Waveform

# 3.9 Example 9: Generate an AM Modulation Waveform

Generate an AM modulation waveform with 80% depth. The carrier is a sine wave with 10kHz frequency, and the modulating wave is a sine wave with 200Hz frequency.

#### Steps:

- Set the frequency, amplitude and offset of the carrier wave.
- 1. Press Waveforms, and choose the sine waveform as the carrier wave
- Press Frequency/Period and choose Frequency which will display in blue color. Input'10' from the keyboard and choose the unit 'kHz' to set the frequency to 10kHz
- 3. Press Amplitude/HighLevel and choose Amplitude which will display in blue color. Input'1' from the keyboard and choose the unit 'Vpp' to set the amplitude to 1Vpp.
- Press Offset/LowLevel and choose Offset which will display in blue color. Input '0' from the keyboard and choose the unit 'Vdc' to set the offset to 0Vdc.
- Set the modulation type AM and parameters.
- 1. Press  $Mod \rightarrow Type \rightarrow AM$ , choose AM. Please notice that the message shown on the middle left side of the screen is 'AM'.
- 2. Press AM Freq, input '200' from the keyboard and choose the unit 'Hz' to set the AM Freq to 200Hz.
- 3. Press AM Depth, input '80' from the keyboard and choose the unit '%' to set the AM depth to 80%.
- 4. Press Shape  $\rightarrow$  Sine, to choose sine wave as the modulating waveform.

When all parameters above are set, the waveform generated is shown in Figure 3-9.

#### SIGLENT

Figure 3-9 Generate an AM Modulation Waveform

# 3.10 Example 10: Generate a FM Modulation Waveform

Generate a FM modulation waveform, the carrier is a sine wave with 10kHz frequency, and the modulating wave is a sine wave with 1Hz frequency and 2kHz frequency deviation.

- Steps:
- Set the frequency, amplitude and offset of the carrier wave.
- 1. Press Waveforms, and choose the sine waveform as the carrier wave.
- Press Frequency/Period and choose Frequency which will display in blue color. Input'10' from the keyboard and choose the unit 'kHz' to set the frequency to 10kHz
- 3. Press Amplitude/HighLevel and choose Amplitude which will display in blue color. Input'1' from the keyboard and choose the unit 'Vpp' to set the amplitude to 1Vpp.
- Press Offset/LowLevel and choose Offset which will display in blue color. Input'0' from the keyboard and choose the unit 'Vdc' to set the offset to 0Vdc.
- Set the modulation type FM and parameters.
- 1. Press  $Mod \rightarrow Type \rightarrow FM$ , choose FM. Please notice that the message shown on the middle left side of the screen is 'FM'.
- Press FM Freq, input '1' from the keyboard and choose the unit 'Hz' to set the FM Freq to 1Hz.
- 3. Press FM Dev, input '2' from the keyboard and choose the unit 'kHz' to set the FM deviation to 2kHz.
- 4. Press Shape  $\rightarrow$  Sine, to choose sine wave as the modulating waveform.

When all parameters above are set, the waveform generated is shown in Figure 3-10.

CH1:S	ine.ON.HiZ	Mod	CH2:S	ine.ON.HiZ	
		Frequency Amplitude Offset Phase	<ul> <li>10.000 C</li> <li>1.000 V</li> <li>0.000 V</li> <li>0.000 °</li> </ul>	00kHz op dc	
FM Freq 1.000 000 Hz		Load	HiZ		
Freq Dev <mark>2.000 000kHz</mark>		Output	ON		
Type	Source	FM	Shape	FM	
FM	Internal	Dev	Sine	Freq	

Figure 3-10 Generate a FM Modulation Waveform

# 3.11 Example 11: Generate a PM Modulation Waveform

Generate a PM modulation waveform, the carrier is a sine wave with 10kHz frequency, and the modulating wave is a sine wave with 2kHz frequency and 90° phase deviation.

#### > Steps:

- Set the frequency, amplitude and offset of the carrier wave.
- 1. Press Waveforms, and choose the sine waveform as the carrier wave.
- Press Frequency/Period and choose Frequency which will display in blue color. Input '10' from the keyboard and choose the unit 'kHz' to set the frequency to 10kHz
- 3. Press Amplitude/HighLevel and choose Amplitude which will display in blue color. Input '5' from the keyboard and choose the unit 'Vpp' to set the amplitude to 5Vpp.
- Press Offset/LowLevel and choose Offset which will display in blue color. Input'0' from the keyboard and choose the unit 'Vdc' to set the offset to 0Vdc.
- Set the modulation type PM and parameters.
- 1. Press  $Mod \rightarrow Type \rightarrow PM$ , choose PM. Please notice that the message shown on the middle left side of the screen is 'PM'.
- 2. Press PM Freq, input '2' from the keyboard and choose the unit 'kHz' to set the PM Freq to 2kHz.
- 3. Press Phase Dev, input '90' from the keyboard and choose the unit ' °' to set the phase deviation to 90°.
- 4. Press Shape  $\rightarrow$  Sine, to choose sine wave as the modulating waveform.

When all parameters above are set, the waveform generated is shown in Figure 3-11.

CH1:S	ine.ON.HiZ	. Mod	CH2:S	ine.ON.HiZ	
			Frequency Amplitude Offset Phase	7 10.000 0 5.000 V( 0.000 V( 0.00 °	00kHz op dc
PM Freq 2.000 000kHz			Load	HiZ	
Phase Dev <mark>90.00°</mark>			Output	ON	
Type	Source	Phase	Shape	PM	
PM	Internal	Dev	Sine	Freq	

Figure 3-11 Generate a PM Modulation Waveform

# 3.12 Example 12: Generate a FSK Modulation Waveform

Generate a FSK modulation waveform with 200Hz key frequency. The carrier is a sine wave with 10kHz frequency, and the hop frequency is 500Hz.

#### Steps:

- Set the frequency, amplitude and offset of the carrier wave.
- 1. Press Waveforms, and choose the sine waveform as the carrier wave
- Press Frequency/Period and choose Frequency which will display in blue color. Input '10' from the keyboard and choose the unit 'kHz' to set the frequency to 10kHz.
- 3. Press Amplitude/HighLevel and choose Amplitude which will display in blue color. Input'5' from the keyboard and choose the unit 'Vpp' to set the amplitude to 5Vpp.
- Press Offset/LowLevel and choose Offset which will display in blue color. Input '0' from the keyboard and choose the unit 'Vdc' to set the offset to 0Vdc.
- Set the modulation type FSK and parameters.
- 1. Press  $Mod \rightarrow Type \rightarrow FSK$ , choose FSK. Please notice that the message shown on the middle left side of the screen is 'FSK'.
- Press Key Freq, input '200' from the keyboard and choose the unit 'Hz' to set the key frequency to 200 Hz.
- 3. Press Hop Freq, input '500' from the keyboard and choose the unit 'Hz' to set the hop frequency to 500Hz.

When all parameters above are set, the waveform generated is shown in Figure 3-12.

Figure 3-12 Generate a FSK Modulation Waveform

# 3.13 Example 13: Generate an ASK Modulation Waveform

Generate an ASK modulation waveform with 500Hz key frequency. The carrier is a sine wave with 5kHz frequency.

- > Steps:
- Set the frequency, amplitude and offset of the carrier wave.
- 1. Press Waveforms, and choose the sine waveform as the carrier wave
- Press Frequency/Period and choose Frequency which will display in blue color. Input '5' from the keyboard and choose the unit 'kHz' to set the frequency to 5kHz
- 3. Press Amplitude/HighLevel and choose Amplitude which will display in blue color. Input '5' from the keyboard and choose the unit 'Vpp' to set the amplitude to 5Vpp.
- Press Offset/LowLevel and choose Offset which will display in blue color. Input '0' from the keyboard and choose the unit 'Vdc' to set the offset to 0Vdc.
- Set the modulation type ASK and parameters.
- 1. Press  $Mod \rightarrow Type \rightarrow ASK$ , choose ASK. Please notice that the message shown on the middle left side of the screen is 'ASK'.
- 2. Press Key Freq, input '500' from the keyboard and choose the unit 'Hz' to set the key frequency to 500 Hz.

When all parameters above are set, the waveform generated is shown in

Figure 3-13 Generate an ASK Modulation Waveform

## 3.14 Example 14: Generate a PSK Modulation Waveform

Generate a PSK modulation waveform with 200Hz key frequency. The carrier is a sine wave with 1kHz frequency.

- > Steps:
- Set the frequency, amplitude and offset of the carrier wave.
- 1. Press Waveforms, and choose the sine waveform as the carrier wave
- Press Frequency/Period and choose Frequency which will display in blue color. Input '1' from the keyboard and choose the unit 'kHz' to set the frequency to 1kHz
- 3. Press Amplitude/HighLevel and choose Amplitude which will display in blue color. Input '5' from the keyboard and choose the unit 'Vpp' to set the amplitude to 5Vpp.
- Press Offset/LowLevel and choose Offset which will display in blue color. Input '0' from the keyboard and choose the unit 'Vdc' to set the offset to 0Vdc.
- Set the modulation type PSK and parameters.
- 1. Press  $Mod \rightarrow Type \rightarrow Page 1/2 \rightarrow PSK$ , choose PSK. Please notice that the message shown on the middle left side of the screen is 'PSK'.
- 2. Press Key Freq, input '200' from the keyboard and choose the unit 'Hz' to set the key frequency to 200 Hz.
- 3. Press Polarity  $\rightarrow$  Positive.

When all parameters above are set, the waveform generated is shown in Figure 3-14.

*CH1:Sine.ON.HiZ Mod			CH2:Sine.ON.HiZ		
Key Freq 200 000 Hz			Frequency Amplitude Offset Phase	7 1.000 00 5.000 ∨µ 0.000 ∨0 0.00 °	00kHz op dc
			Load Output	HiZ ON	<mark>6</mark> 문 <sub>문</sub>
Type PSK	Source Internal	PSK Rate		Polarity Positive	

Figure 3-14 Generate a PSK Modulation Waveform

## 3.15 Example 15: Generate a PWM Modulation Waveform

Generate a PWM modulation waveform with 200Hz key frequency. The carrier is a pulse wave with 5kHz frequency.

- > Steps:
- Set the frequency, amplitude and offset of the carrier wave.
- 1. Press Waveforms, and choose the Pulse waveform as the carrier wave
- Press Frequency/Period and choose Frequency which will display in blue color. Input '5' from the keyboard and choose the unit 'kHz' to set the frequency to 5kHz
- 3. Press Amplitude/HighLevel and choose Amplitude which will display in blue color. Input '5' from the keyboard and choose the unit 'Vpp' to set the amplitude to 5Vpp.
- Press Offset/LowLevel and choose Offset which will display in blue color. Input '0' from the keyboard and choose the unit 'Vdc' to set the offset to 0Vdc.
- Press PulWidth/DutyCycle and choose PulWidth which will display in blue color. Input '40' from the keyboard and choose the unit 'us' to set the PulWidth to 40us
- Set the modulation type PWM and parameters.
- 1. Press Mod, Please notice that the message shown on the middle left side of the screen is 'PWM '.
- 2. Press PWM Freq, input '200' from the keyboard and choose the unit 'Hz' to set the PWM Freq to 200Hz.
- 3. Press Width Dev, input '20' from the keyboard and choose the unit 'us' to set the width deviation to 20us

When all parameters above are set, the waveform generated is shown in Figure 3-15.

CH1:P	ulse.ON.Hi	Z Mod	CH2:Si	ne.ON.HiZ	
			Frequency Amplitude Offset Pulse Widt Rise Edge	<ul> <li>5.000 00</li> <li>5.000 Vi</li> <li>0.000 Vi</li> <li>40.000u</li> <li>16.8ns</li> </ul>	DOkHz pp dc Is
PWM Freq 200.000 000 Hz			Delay	0.000 00	00 s

Type PWM	Source Internal	Width Dev	Shape Sine	PWM Freq	

Figure 3-15 Generate a PWM Modulation Waveform

# 3.16 Example 16: Generate a DSB-AM Modulation Waveform

Generate a DSB-AM modulation waveform with 100Hz modulating frequency. The carrier is a sine wave with 2kHz frequency.

#### > Steps:

- Set the frequency, amplitude and offset of the carrier wave.
- 1. Press Waveforms, and choose the sine waveform as the carrier wave.
- Press Frequency/Period and choose Frequency which will display in blue color. Input '2' from the keyboard and choose the unit 'kHz' to set the frequency to 2kHz
- 3. Press Amplitude/HighLevel and choose Amplitude which will display in blue color. Input '4' from the keyboard and choose the unit 'Vpp' to set the amplitude to 4Vpp.
- Press Offset/LowLevel and choose Offset which will display in blue color. Input '0' from the keyboard and choose the unit 'Vdc' to set the offset to 0Vdc.
- Set the modulation type DSB-AM and parameters.
- Press Mod → Type → DSB-AM, choose DSB-AM. Please notice that the message shown on the middle left side of the screen is 'DSB-AM'.
- 2. Press DSB Freq, input '100' from the keyboard and choose the unit 'Hz' to set the DSB Freq to 100Hz.

When all parameters above are set, the waveform generated is shown in Figure 3-16.

CH1:S	ine.ON.HiZ	Mod	CH2:Si	ne.ON.HiZ	
			Frequency Amplitude Offset Phase	2.000 00 4.000 V 0.000 V 0.00 °	DOkHz pp dc
DSB Freq 10 <mark>0</mark> .000 000 Hz			Load Output	HiZ ON	6 문제
Type DSB-AM	Source Internal	DSB Freq	Shape Sine		

Figure 3-16 Generate a DSB-AM Modulation Waveform

# **4** Troubleshooting

## 4.1 General Inspecting

After receiving a new SDG1000X Series Function/Arbitrary Generator please inspect the instrument as followed:

#### 1. Inspect the shipping container for damage.

Keep the damaged shipping container or cushioning material until the contents of the shipment have been checked for completeness and the instrument has been checked mechanically and electrically.

#### 2. Inspect the entire instrument.

In case there is any mechanical damage or defect, or the instrument does not operate properly or fails in the performance tests, notify the SIGLENT sales representative.

If the shipping container is damaged, or the cushioning materials show signs of stress, notify the carrier as well as the SIGLENT sales department. Keep the shipping materials for carrier's inspection.

#### 3. Check the accessories.

Accessories supplied with the instrument are listed in "**Appendix A**". If the contents are incomplete or damaged, notify the SIGLENT sales representative.

## 4.2 Troubleshooting

- 1. After the generator is powered on, if the screen remains dark please do as the following steps:
- (1) Check the power cable's connection.
- (2) Ensure the power switch is turned on.
- (3) After the inspections above, restart the generator.
- (4) If the generator still doesn't work after checking, please contact SIGLENT.
- 2. If there is no waveform output after setting the parameters, please do as the following steps:
- (1) Check whether the BNC cable has a good connection to the output port.
- (2) Check whether the output keys have been turned on.
- (3) If the generator still doesn't work after checking, please contact SIGLENT.

# **5 Service and Support**

### 5.1 Maintenance summary

**SIGLENT** warrants that the products it manufactures and sells will be free from defects in materials and workmanship for three years from the date of shipment from an authorized **SIGLENT** distributor. If a product is proved to be defective within the warranty period, **SIGLENT** will provide repair or replace the unit as described in the complete warranty statement.

To arrange for service or obtain a copy of the complete warranty statement, please contact your nearest **SIGLENT** sales and service office. Except as provided in this summary or the applicable warranty statement, **SIGLENT** makes no warranty of any kind, express or implied, including but not limited to the implied warranties of merchantability and special applicability. In no event shall **SIGLENT** be liable for indirect, special or consequential damages.

## 5.2 Contact SIGLENT

SIGLENT TECHNOLOGIES CO., LTD

Address: 3/F, NO.4 building, Antongda Industrial Zone, 3rd Liuxian Road, 68th District, Baoan District, Shenzhen, P.R. China

Tel: 400-878-0807

E-mail: sales@siglent.com

# 6 Appendix

## **Appendix A: Accessories**

#### SDG1000X Series Function/Arbitrary Waveform Generator Accessories:

#### **Standard Accessories:**

- Quick Start Guide
- A Calibration Report
- A Power Line that fits the standard of the destination country
- A USB Cable

#### **Optional Accessories:**

- USB-GPIB adapter (IEEE 488.2)
- SPA1010 Power Amplifier
- 20dB Attenuator

## **Appendix B: Daily Maintenance and Cleaning**

#### **Daily Maintenance**

Do not store or leave the instrument in where the display screen will be exposed to direct sunlight for a long period of time.

**CAUTION:** To avoid damage to the instrument, do not expose it to spray, liquid, or solvent.

#### Cleaning

If the instrument requires cleaning, disconnect it from all power sources and clean it with a mild detergent and water. Make sure the instrument is completely dry before reconnecting it to a power source.

To clean the exterior surface, perform the following steps:

1. Remove loose dust on the outside of the instrument with a lint-free cloth. When cleaning the screen, be careful to avoid scratching the transparent plastic protective screen.

2. Use a soft cloth dampened with water to clean the instrument.

**WARNING:** To avoid any damage to the surface of the instrument, do not use any abrasive or chemical cleaning agents.
